Atomic Absorption Supplies

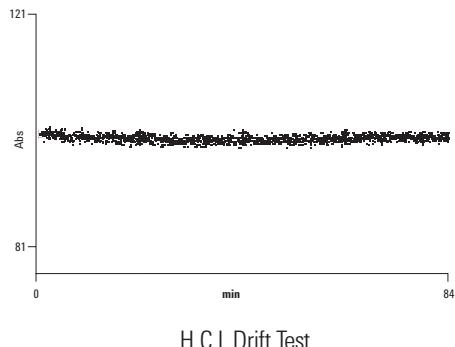

Hollow Cathode Lamps

Agilent provides a comprehensive range of consumables for atomic absorption, designed to maintain the high performance of your AA instrument. In addition, Agilent continues to research and manufacture an extensive range of single-element and solid-cathode multi-element lamps, plus high-intensity UltrAA lamps for superior cost-effective performance.

Agilent hollow cathode lamps provide optimal signal-to-noise performance, permitting determinations at even lower levels with the most demanding applications. Agilent lamps are manufactured in an ISO 9001 certified environment and use proven processing steps to guarantee quality and reliability, and to ensure they are optimized to deliver the best performance from your AA. Agilent lamps provide high spectral purity because of purified materials, an extended processing cycle, and unique lamp conditioning procedures. These ensure minimal lamp warm-up time and good stability during operation.

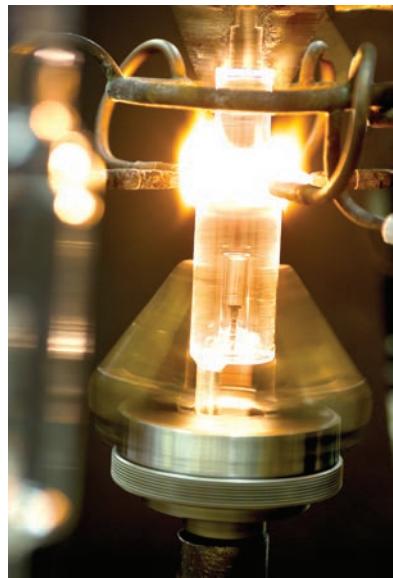

Economical operation is assured by the long lamp life, typically exceeding 5,000 mA hours, over and above our factory conditioning and testing service.

Consistent performance is also assured. All lamps are tested to confirm that the emission intensity exceeds a minimum level. No lamp leaves our factory without having satisfied our demanding test standards. These tests ensure that you receive quality lamps that can provide optimum signal-to-noise ratio and stable performance throughout the life of the lamp.

H.C.L Drift Test

The trace shows the variation in emission intensity from a lamp over a 1 hour 24 minutes period. The steady trace demonstrates the superb stability and low drift achieved when using our hollow cathode lamps (after a suitable warm-up period).

Coded Single Element Lamps

- High performance – manufactured from the purest cathode materials
- Easier to use – element coded for automatic lamp recognition, preventing errors
- Stable operation – extended processing ensures minimal warm-up and good lamp stability

High Intensity UltrAA Coded Single Element Lamps

- Emission intensity is increased by 3 to 5 times, for lower noise
- Sensitivity is increased by up to 40 % due to the sharper emission profile, allowing determinations at even lower levels
- Element coded for automatic lamp recognition, preventing errors

UltrAA lamps are high intensity, boosted discharge hollow cathode lamps. They use the standard lamp current, but apply an additional boost discharge within the lamp to increase the emission intensity. The boost current is supplied from a secondary control module (either integrated into the instrument or supplied from an external module).

UltrAA lamps are manufactured from the purest cathode materials, and every lamp is QA/QC tested to guarantee performance and reliability. These lamps are coded for automatic lamp recognition (except for 55 AA, SpectrAA-50/55 and SpectrAA-5 models), eliminating the risk of time-consuming errors when reprogramming the lamp position.

ACT-80 Atom Concentrator Tube

The ACT-80 Atom Concentrator Tube is a quartz tube that is positioned in the air-acetylene flame to enhance the sensitivity of flame AA by 2–3 times when compared to that of normal flame AA. An improvement in detection limit is also achieved.

Graphite Tubes and Platforms

Graphite tubes are quality tested to ensure each batch passes our demanding performance specifications for contamination, sensitivity, precision, electrical resistance, and lifetime.

Use partitioned tubes for general purpose work and when you need the best detection limits with samples that have low background. These are also ideal when measuring organic solutions, or samples with low viscosity that may spread throughout the tube, potentially degrading precision.

Omega platform tubes combine ease-of-use with perfect atomization. The integrated platform ensures a perfect thermal profile to produce dense atom clouds for good signal-to-noise ratios and the best detection limits.

The combination of the solid pyrolytic platforms and plateau tubes provides continuity with older methods, and gives the best platform effect. This ensures best performance with samples that have high background or interferences. More operator skill is required for best results.

- High purity graphite reduces spurious absorption from trace contaminants and improves signal-to-noise ratio
- Every tube is individually tested for reproducible and reliable results
- Perform fewer repeats and increase productivity

Autosampler Supplies

SPS 4 Autosampler Supplies

The next-generation SPS 4 is a high-performance autosampler for atomic spectroscopy applications. Designed to meet the needs of high-throughput laboratories requiring a fast, high-capacity (up to 360 samples or 768 microtiter wells), reliable autosampler. Small, quiet, easy-to-use, and affordable, the SPS 4 is suitable for ultratrace analysis by ICP-MS and rugged and robust enough for FAAS, MP-AES, and ICP-OES users.

Built around an innovative gantry design that supports the mechanical components between two rigid pillars, the SPS 4 provides improved accuracy and precision, high speed, ease of access, and corrosion resistance. All contained within a footprint that is nearly 40 % smaller than other autosamplers in its class.

AA/MP-AES, ICP-OES, and ICP-MS Standards

Agilent offers a comprehensive range of single and multi-element standards, ionization buffers, metallo-organic and biodiesel standards, solvents, and environmental standards for atomic spectroscopy. With the assurance of NIST traceability, Agilent's Certified Reference Materials and standard mixes offer accurate, reliable calibrations at great value.

Every solution is manufactured using high purity starting materials, which are regularly tested in accordance with NIST guidelines to provide traceability. All Agilent inorganic spectroscopy standards include a Certificate of Analysis (CoA) that details the certified concentration, measurement uncertainty, and actual concentration values for up to 68 trace impurities (assayed using an Agilent ICP-MS for ICP-OES/ICP-MS standards).

In addition, the CoA details the method used for certification, intended use, instructions for proper use, and recommendations for appropriate conditions of storage.

- Gives you confidence in your AAS, ICP-OES or ICP-MS, and MP-AES results
- Standards shipped from stock to maximize uptime
- Supplied with a Material Safety Data Sheet (MSDS) and CoA for complete assurance
- All standards packaged in preleached HDPE bottles, secured with a tamper-evident seal

IntelliQuant Calibration Standards for 5100/5110 SVDV/VDV ICP-OES

Agilent's IntelliQuant feature for the 5100/5110 Dual View ICP-OES identifies and calculates a semiquantitative concentration in a sample, expanding the capabilities of a classic ICP-OES analysis. This allows analysts to quickly check the semiquantitative concentration of many elements in their sample, without changing their routine methods or preparing extra multi-element standards, which can be technically challenging and time consuming.

IntelliQuant includes default calibrations, available for axial, radial and synchronous vertical dual view modes, which allow the estimation of up to 70 elements in a sample without the need to analyze any additional standards. If more accurate results are required, just update the default calibrations by using the multi-element IntelliQuant calibration standards (either individually or the complete kit). When measured, this updates the default IntelliQuant calibration for all 69 elements. These standards are ideal for labs requiring more accurate semiquantitative analysis without time consuming standard preparation.

For more details, please see Rapid Sample Assessment and Simplified Method Development with IntelliQuant, Agilent publication 5991-6876EN.

TIPS AND TOOLS

Use balances, not pipettes, for diluting. Try to dilute on a weight/weight basis using calibrated balances; the uncertainty of a balance is much lower than a pipette.

TIPS AND TOOLS

"Matrix matching" of major sample components can be valuable with many spectrometric techniques. Our 1 % (10,000 µg/mL) standards work well as stock materials for matrix matching.

TIPS AND TOOLS

Thorough mixing is especially important when using oil-based standards. Due to their viscosity they are difficult to homogenize. For best results, always mix the standard by vigorously shaking the container for at least a few minutes. Alternately, shake the container and sonicate the standard in an ultrasonic bath for a few minutes.

TIPS AND TOOLS

Store metallo-organic standards in a cool, dry place.

Agilent Recirculating Chiller

Reliable smart-cooling to reduce downtime

Benefits of the Agilent recirculating chiller

- Robust, reliable cooling
- Remote access through ICP Expert
- View key parameters at-a-glance on the touchscreen display
- On-screen error notifications
- Automatic 'chiller off' end-of-run action

Reduce time-wasting with a full integration into ICP Expert software

In most labs, chillers are kept in separate rooms for noise and heat control. Walking to a separate room to operate a chiller wastes time - especially detrimental in high-throughput labs. The remote-control capability of the Agilent recirculating chiller eliminates this, with full automation within Agilent's ICP Expert software.

Want to run samples unattended or overnight? There is an end-of-run 'chiller off' action, so you do not have to worry about the chiller wasting power when it is not in use.

Smart software integration tools for ease-of-use and troubleshooting

The large, full-color LCD touchscreen display provides key information at-a-glance. Key chiller parameters, such as temperature and fluid level, can also be viewed within ICP Expert. This smart software integration means that users can monitor key chiller parameters remotely at anytime and receive error notifications if the chiller malfunctions. This removes the need for time-consuming troubleshooting.

ETC 60 Electrothermal Temperature Controller

The Agilent ETC 60 Electrothermal Temperature Controller is an electrically heated quartz cell used for hydride analysis. Since it heats the quartz cell without a flame, the ETC 60, when used with the SPS 4 autosampler and the VGA 77, allows safe, unattended analysis of up to 270 samples with Agilent atomic absorption instruments.

By combining the ETC 60 with the VGA 77, Agilent Zeeman instruments can determine the hydride elements using the vapor-generation technique. The lower atomization temperatures used with the ETC 60 also increase sensitivity by up to 30% compared to flame atomization.

Features

- Flameless atomization for vapor generation AA
- Reduced running costs because no acetylene gas is required
- Enables the determination of Hg and the six hydride-forming elements
- Allows unattended operation for maximum productivity
- Eliminates flame flicker noise
- Improves sensitivity by 20-30%
- SpectrAA software controls the ETC 60 temperature directly (with Version 5 or later)
- The ETC 60 is compatible with any instrument that can use the VGA 77.

GTA120 Graphite Tube Atomizer

The GTA 120 Graphite Tube Atomizer provides superior graphite furnace performance, no matter how difficult the sample, making it ideal for applications as diverse as chemical, petrochemical, food, and agriculture.

The GTA 120 is compatible with the 280FS AA and 240FS AA instruments.

Features

- Delivers extremely fast atomization even with difficult sample matrices
- Long atomization cell ensures the highest sensitivity and lowest detection limits for best signal-to-noise
- Gas minimizing technology (GMT) extends tube lifetimes, reduces gas consumption by 40%, and lowers analysis costs
- With an ultra-stable mounting and position lock, the programmable sample dispenser (PSD 120) furnace autosampler offers plug-and-play mounting, eliminating realignment
- Get simple method development by using Tube-CAM (optional) to set accurate probe dispensing heights and confirm optimum drying temperatures, and the SRM wizard to optimize the ashing and atomization temperatures
- Carousel capacity for 135 solutions minimizes changes for high-throughput labs, enabling longer unattended runs

SpectrAA Software

Agilent SpectrAA Software is user-friendly software that provides access to all instrument controls, sample results, and signal graphics from one window. The intuitive user interface accommodates users of all skill levels, and the PROMT measurement mode can reduce sample analysis time and increase productivity. SpectrAA Software also includes a suite of useful workflow capabilities, including simple method development, powerful reporting options, tracking of consumables usage, and compliance support for regulated industries.

SpectrAA software is available as SpectrAA Base, SpectrAA Pro with extra quality control capabilities, and SpectrAA CFR for pharmaceutical laboratories.

Features

- Simple method development with the Surface Response Methodology (SRM) wizard
- Reduce downtime and running costs by tracking the operating lifetime of key consumables such as lamps, electrodes, and pump tubing
- Display a variety of results, including final concentrations or raw signals
- Color-coded results can highlight out-of-range results, uncalibrated results, or other errors
- Report sample results in units independent of those used for calibration, and create reports in sequential or multi-element formats
- Use RANDOM sample function to schedule urgent sample measurement immediately after the current sample is complete, then resume normal sequence
- Simplify label entry with autocopy and unique pattern recognition, read barcoded samples directly, and import labels from laboratory information management systems (LIMS)
- All current US EPA tests are built in to help ensure EPA compliance
- Built-in technical controls ensure the security of your data, control access, and facilitate compliance as defined by US FDA 21 CFR Part 11, EU Annex 11 and similar national electronic record regulations.

ICP-OES Torches

Available in a wide range of styles from 0 to 3 slots, depending on instrument and application needs. The slots in the side of the torch allow the plasma to be viewed through the slot and not the quartz. This ensures the best performance, while maintaining optimum shielding of the plasma from entrained air. Torches without slots are recommended for fusions and high TDS samples. One-slot torches are the standard torch for aqueous solutions. Three-slot torches are typically used for organic analysis.

TIPS & TOOLS

Alumina injectors are corrosion-resistant to all mineral acids, including HF and aqua regia, but they can also be used with less volatile organic solvents, e.g., xylene. The 2.0 mm id alumina injector is the standard injector, but a range of other sizes are available.

TIPS & TOOLS

Quartz injectors are recommended for organic solvents and non-HF matrices. Use narrow-bore injectors for more volatile organic solvents such as gasoline.

TIPS & TOOLS

Alumina injectors are compatible with twist-type and cassette torch mounts. They are corrosion-resistant to all mineral acids, including HF and aqua regia, but can also be used with less volatile organic solvents, e.g., xylene. The 2.0 mm id alumina injector is the standard injector, but a range of other sizes are available.

TIPS & TOOLS

Quartz injectors are compatible with twist-type and cassette torch mounts. They are recommended for organic solvents and non-HF matrices. Use narrow-bore injectors for more volatile organic solvents such as gasoline.

TIPS & TOOLS

Nickel interface cones provide the most economical operation as it is a rugged and long-lasting material. They are recommended for the majority of sample types.

Platinum interface cones provide better resistance to chemical attack and are required for analysis of aggressive acids (e.g. hydrofluoric acid) and other more corrosive sample types.
