YOUR ESSENTIAL RESOURCE FOR

# SAMPLE PREPARATION PRODUCTS FOR CHROMATOGRAPHY

## Reliably extract and concentrate samples from complex matrices

Sample preparation is an essential part of successful chromatography. It extends column lifetime, reduces the need for repeated samples, and minimizes interferences that can jeopardize your separation, detection, and quantification. Agilent offers the most complete line of sample preparation products across the full spectrum of instrumentation. These include:

- **Bond Elut SPE products** – selectively remove interferences and analytes from challenging matrices. They feature trifunctional bonding chemistry for greater stability – plus a three-tier QC process that confirms the correct particle size. Choose from the largest selection of sorbent formats in the market today.
- **Prepackaged QuEChERS kits** – make sample preparation faster, easier, and more reliable. Options include extraction kits with preweighed salts in anhydrous packets, dispersive kits that accommodate aliquot volumes specified by AOAC/EN methods, and ceramic homogenizers that promote consistent extraction and recovery.
- **Captiva filtration products** – improve both system performance and analytical quality and prevent extractables or other contaminants from damaging the integrity of your samples. Choose from the industry's widest variety of membrane types to suit your applications.
- **EMR–Lipid** employs an innovative chemistry to selectively trap linear hydrocarbon chains (lipids) in dirty sample extracts, while bulkier target analytes remain in solution. EMR–Lipid is available in both Captiva filtration cartridges and 96-well plates and dispersive SPE (dSPE) formats.

## How do you select the sample preparation product that is just right for your needs?

We've included some tools that may help. In the following pages, please see our interferences chart, applications guide, and format guide, which collectively display the various physical configurations available to match your lab's workflow. These tools, along with information in each product section, can help you select from a multitude of options and get the Agilent sample preparation product that is just right for your lab.

# Featured Products

## Bond Elut Plexa SPE Products

Bond Elut Plexa is the next generation of polymeric SPE products. A unique polymeric functionality and optimized methodologies deliver high recoveries with excellent cleanliness, reduced ion suppression, and ease-of-use in any SPE workflow.

## Bond Elut QuEChERS Kits

With Agilent Bond Elut QuEChERS disposable preweighed extraction and dispersive kits, you can extract and prepare complex matrices for multiclass, multiresidue pesticide analysis in minutes rather than hours.

## Bond Elut EMR–Lipid dSPE

Agilent offers dispersive SPE kits that are specifically designed to remove lipids from high fat samples. EMR–Lipid provides selective lipid removal from complex samples without analyte retention. EMR–Lipid employs an innovative chemistry to selectively trap linear hydrocarbon chains (lipids) in dirty sample extracts, while bulkier target analytes remain in solution.

## Captiva EMR–Lipid

Captiva EMR–Lipid provides highly selective and efficient lipid/matrix removal without unwanted analyte loss. The novel EMR–Lipid technology removes lipids based on a combination of size exclusion and hydrophobic interaction. Effective lipid removal assures minimal ion suppression of target analytes, which significantly improves method reliability and ruggedness. Captiva EMR–Lipid is available in cartridge and 96-well plate formats.

## Captiva Syringe Filters

Faster than centrifugation and easily automated, Captiva's unique dual-depth filtration media provides complete removal of precipitated proteins, or particulates, and outstanding resistance to sample clogging.

## PPM-48 and PPM-96

The Agilent positive pressure manifold 48 and 96 processors (PPM-48 and PPM-96) are both excellent alternatives for sample processing. The processors have unique restricted flow ports to create consistent gas flow through every channel, even when channels are not being used or have run dry. This consistency ensures reproducibility from row-to-row and cartridge-to-cartridge regardless of the cartridge or well contents.

# Sample Preparation Selection

## Option 1—Interference Guide

Select your sample preparation technique based on the type of interferences you need to remove

Sample Preparation Technique

## Option 3—Format Guide

Select the sample preparation product best suited for your analysis requirements

### Agilent Offers a Broad Range of Tube Formats and 96-Well Plate Designs

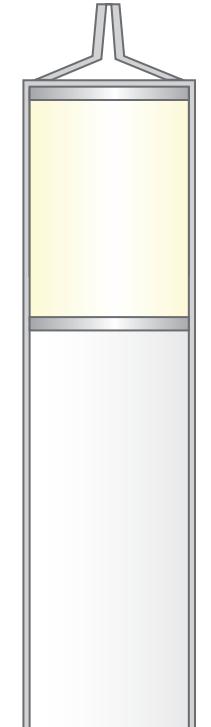

We offer a full set of straight barrel tubes ranging from 1 to 150 mL in a wide range of bonded silica and polymeric chemistries, sorbent particle sizes, and bed masses.

For more specialized applications, the Luer compatible Bond Elut Jr and the funnel-shaped large reservoir capacity (LRC) tubes offer flexibility and function across a range of sorbent bed masses. To support automation, tableless (flangeless) versions of the straight barrel cartridges are also available.

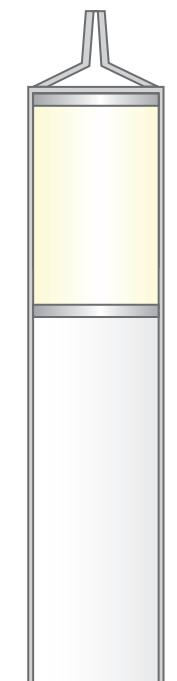

Diagrams are to scale.

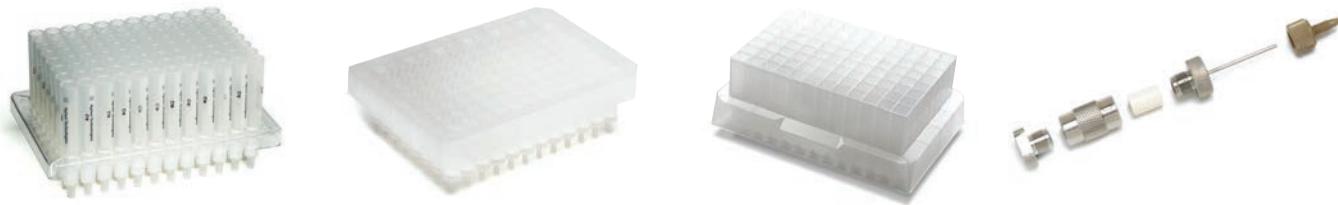

60 mL

20 mL

12 mL

### Bond Elut 96-Well Plate

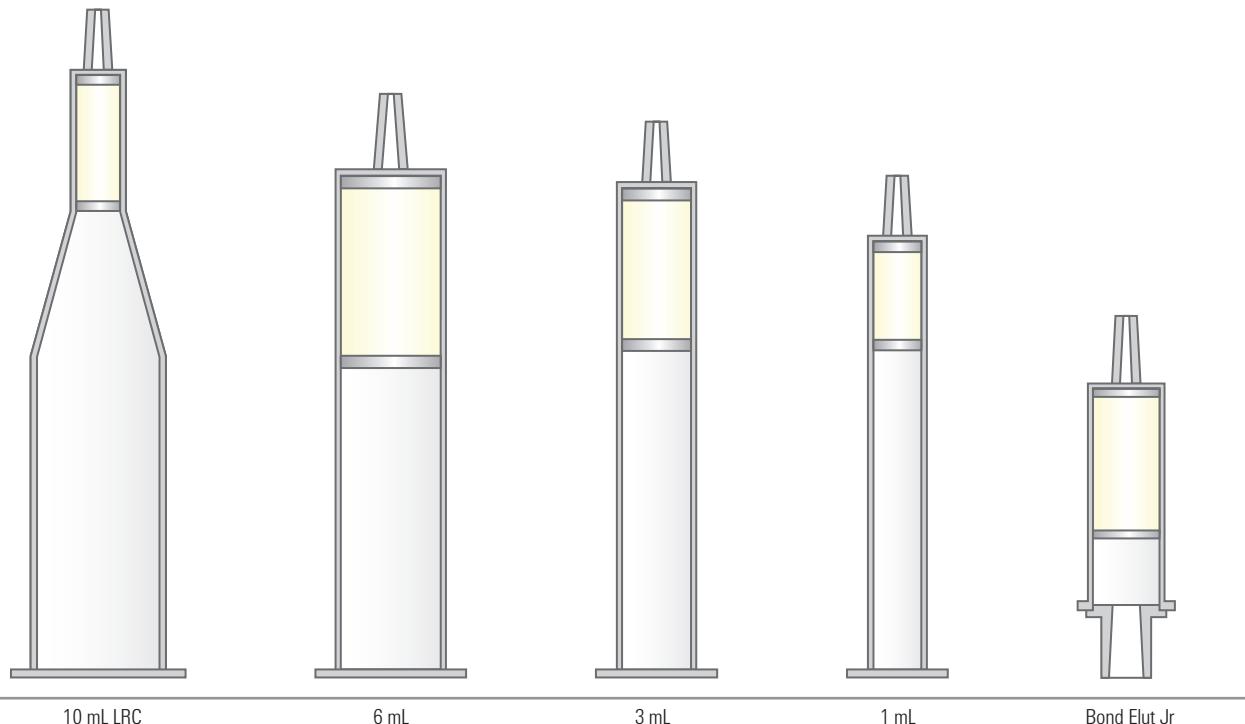

Bond Elut 96-well plate formats are best in class for flow performance and well-to-well reproducibility. These specially designed plates are available in a large range of sorbent chemistries with well volumes of 1 and 2 mL.

### VersaPlate

VersaPlate is an innovative, versatile design that lets you customize plates, insert tubes packed with different phases for sorbent screening, or insert only enough tubes to match the number of samples to be extracted for minimal waste. The Luer tip of VersaPlate tubes can also fit VacElut 12, VacElut 20, and VacElut SPS 24 vacuum manifolds. VersaPlate can be bought in a prepacked 96 position format or as loose tubes.

### Online SPE

Agilent Bond Elut online SPE cartridges are designed to provide sample cleanup and preconcentration. Online SPE involves loading the sample onto the online SPE cartridge by applying flow in one direction across the sorbent. The flow across the sorbent is then reversed to elute the target analytes directly onto the analytical LC column. Available with Agilent PLRP-S polymeric sorbent materials, Bond Elut online SPE cartridges provide good stability and performance. Bond Elut online SPE cartridges also offer a simple, automated method for sample analysis.

## Solid Phase Extraction (SPE)

### Agilent Bond Elut:

#### Accuracy Starts Here

For over 30 years, Bond Elut has been the most trusted name in solid phase extraction. After years of use, chemists at top companies worldwide have thoroughly documented its many applications and proven its performance.

Bond Elut is manufactured using state-of-the-art automation to guarantee quality and consistency. Optical scanners installed throughout our automated assembly process inspect each Bond Elut tube at multiple points. What's more, 25 different tests are conducted during manufacture, to ensure reproducibility. If an imperfection is spotted, the tube is removed from the assembly line. The result is consistently reliable Bond Elut cartridges, time and time again.

Over 40 different sorbent functionalities are available in many cartridge formats including straight barrel, large reservoir capacity (LRC) and Bond Elut Junior (Jr). 96-well plate configurations support automated workflows, with flexibility for method development and scale-up. Bulk packaging of popular products provides a cost-effective solution for high-throughput. Trust integrated solutions from Agilent to connect your sample preparation, analysis, and reporting needs to deliver the quality and reliability your lab needs.

## The Bond Elut Difference

- **Heritage of reliability:** With years of use in some of the most demanding analytical laboratories in the world, Bond Elut products have a proven track record resulting in a strong publication pedigree.
- **Options for your needs:** Offering extraction solutions for the widest range of analytes and matrices, bonded silica phases for high specificity methods and polymeric phases for rapid method development, Bond Elut has the largest choice of formats and sorbents in the market today.
- **Innovative products designed for lab efficiency:** Whether it is fast flow polymeric particles or our patented 96-well plate design, all Bond Elut products are created for ease-of-use, reliability, and flexibility to meet both manual and automated requirements.
- **Technical support at every step:** For your specific applications, or to help solve occasional technical issues, a global team of analytical scientists is on hand to assist.
- **World class manufacturing and quality:** Unrivaled manufacturing control, plus exacting ISO 9001: 2000 compliance inspections guarantee the consistent quality of Bond Elut.

### TIPS AND TOOLS

For more details on Agilent polymeric SPE products, see the Agilent *Bond Elut Plexa and Polymeric SPE Selection Guide*, publication number 5990-8589EN.

For details on Agilent Silica-Based SPE products, see the Agilent *Bond Elut Silica-Based SPE Selection Guide*, publication number 5990-8591EN.

## Cross Reference of Comparable Phases by Manufacturer

Different chemistries and manufacturing processes create sorbents that exhibit differences in selectivity, so there is no universal equivalent for every application; however performances of products can be similar in many applications. This table provides suggestions for using Agilent Bond Elut products in comparison to other manufacturers.

If you are an Agilent SampliQ user, contact our technical support for Bond Elut options for your sample preparation needs.

## Sorbent Specifications

Our most common silica-based Bond Elut packings are described as 40 µm materials, but looking at the lot analyses, you can see that the actual mean is around 55 µm. We have been making silica-based Bond Elut packings since 1979, using the same diameter silicas; in that time, the models used to estimate irregular particle diameters and the testing equipment have changed. We have retained the term 40 µm, because so many official methods that specify a 40 µm Bond Elut sorbent. As other suppliers attempted to copy the successful Bond Elut product specifications, the term has become an industry standard. You can be assured that the actual average particle in our regular silica Bond Elut is the same now as it was 30 years ago, when we first pioneered SPE as a sample preparation technology.

Sorbent Phase	Category	Bonded Functional Group/Base Material	Encapped	Format	Typical Carbon Loading (%)	Surface Area (m <sup>2</sup> /g)	Particle Size (µm) and Shape	Mean Pore Size (Å)	Page No.

## Bond Elut Plexa Polymeric SPE

The Bond Elut Plexa family is a new generation of polymeric SPE products, designed for simplicity, improved analytical performance, and ease-of-use. Its uniqueness lies in the novel hydroxylated exterior, hydrophobic interior, and advanced polymeric architecture. This advanced material offers excellent flow characteristics due to its monodisperse particle size distribution, affording superior ease-of-use, with minimal clogging of the packed bed. The amide-free particle technology does not provide binding sites for endogenous interferences, such as proteins and lipids.

### **Bond Elut Plexa**

Bond Elut Plexa is a nonpolar divinylbenzene-based neutral polymeric sorbent. This sorbent is the best choice for nonionic extraction of a wide range of acidic, neutral, and basic analytes from different matrices.

### **Bond Elut Plexa PCX**

Bond Elut Plexa PCX is a cation exchanger with mixed mode sorbent characteristics and is therefore suitable for the extraction and cleanup of weak bases from biofluids. Bond Elut Plexa PCX demonstrates the same excellent particle size distribution and integrity as Bond Elut Plexa. A highly controlled sulfonation process results in zero fines for Bond Elut Plexa PCX.

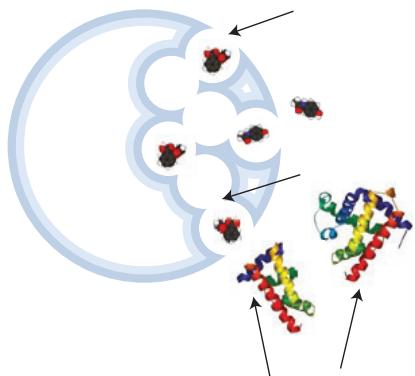

### **Bond Elut Plexa PAX**

Bond Elut Plexa PAX is an anion exchanger for nonpolar and acidic analytes, and is based on the same innovative base polymer particle technology as the other members of the Plexa SPE family.

## Advanced Polymer Architecture Improves Extraction Performance

**LOAD:**

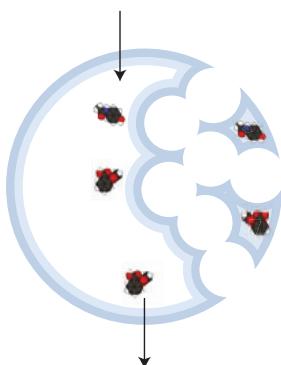

Water-rich, hydrophilic surface allows excellent phase transfer of analytes into the polymer core.

Large endogenous proteins do not bind to the surface of the polymer and cannot access pore structure.

**WASH:**

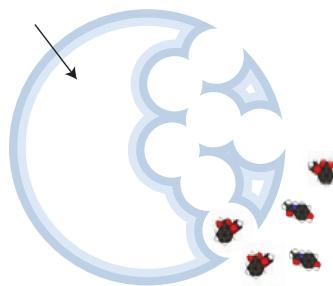

Analytes that have crossed the hydrophilic layers will remain tightly bound in the hydrophobic core.

Interferences wash away without leaching the analytes of interest.

**ELUTE:**

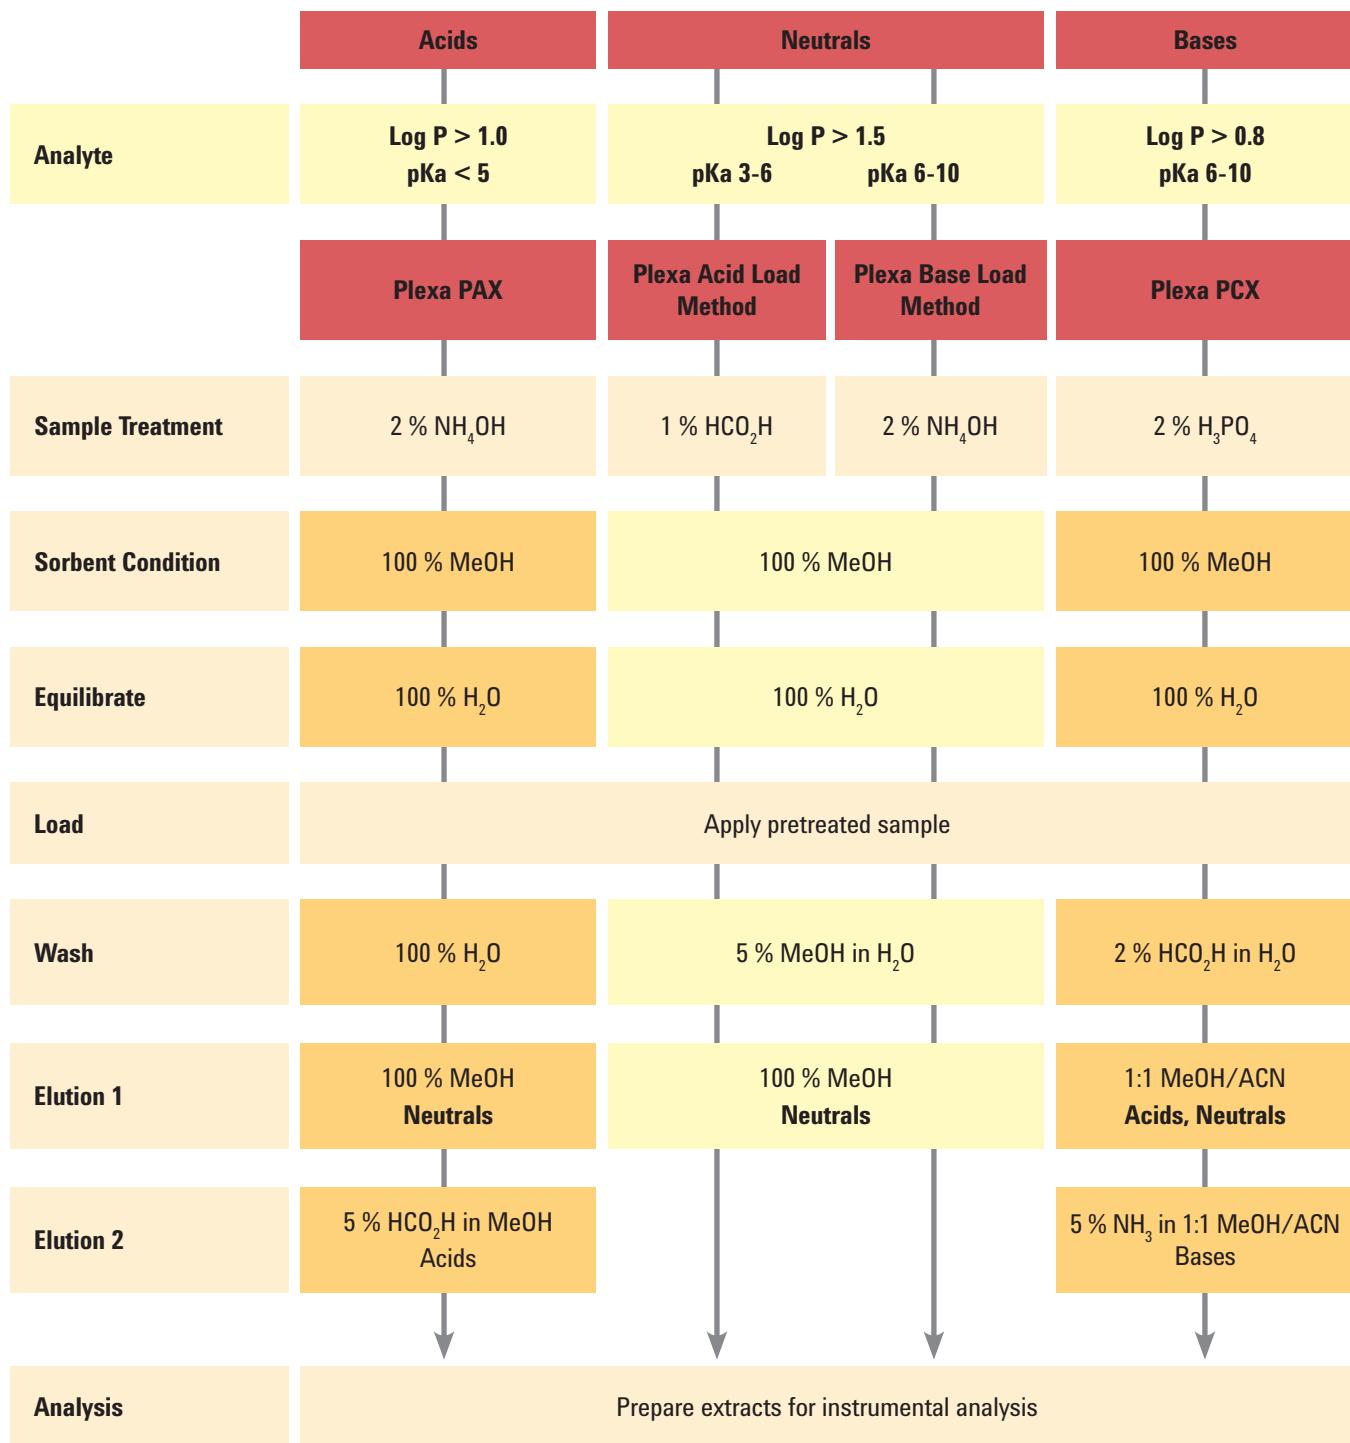

Specially engineered pore structure allows excellent mass transfer out of the polymer.

Clean extract with high recovery.

## General Protocol for Trouble-Free SPE Applications with Bond Elut Plexa Polymeric SPE

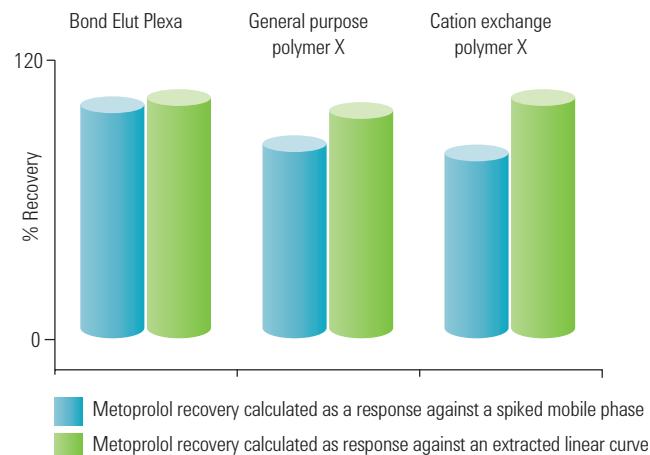

Regardless of your application or sample type, you will appreciate the difference the Bond Elut Plexa range makes. Plexa delivers simple methods and superior flow characteristics that effectively eliminate common matrix background that can cause interference and ion suppression, resulting in improved analytical sensitivity and data quality.

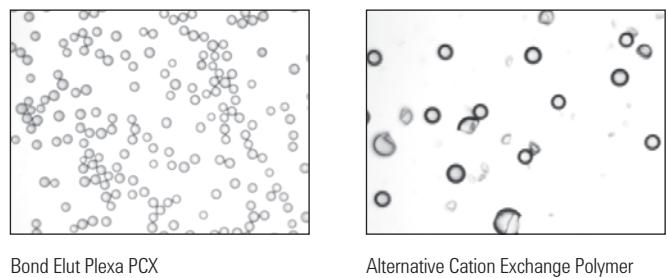

## Improved Sensitivity

Matrix background can result in significantly decreased analytical sensitivity due to interference, coelution, or ion suppression. Bond Elut Plexa gives you higher recoveries in cleaner extracts, which translates into better sensitivity. Plexa delivers high recoveries regardless of whether absolute or relative calculations are used. This indicates that interference is minimized and maximum sensitivity is achieved. Relative recovery calculations (green bars) are routinely used, but these may mask the effects of interference or ion suppression, which are normalized.

### Plexa improves sensitivity by minimizing interference or ion suppression effects and maximizing recovery

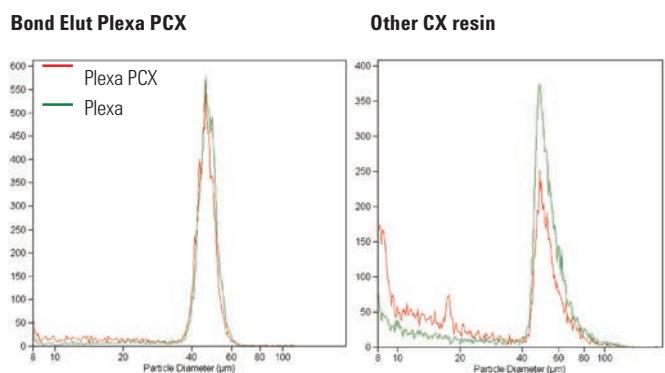

### Comparison of particle sizes of nonpolar SPE polymers by imaging analysis

Bond Elut Plexa PCX      Alternative Cation Exchange Polymer

### Comparison of particle size distributions of nonpolar SPE sorbents

The narrow particle size distribution offers reproducible, superior flow characteristics with minimal clogging.

## Bond Elut Plexa

### Advanced Polymer Technology for Simplified SPE

- Fast flow, reproducible performance, and ease-of-use
- Improved extract cleanliness minimizes sample matrix interferences
- Nonpolar retention mechanism

Bond Elut Plexa polymeric SPE offers straightforward, easy-to-use methods that simplify sample preparation processes. The water-wettable, hydroxylated exterior allows excellent flow, even with biological fluids. A gradient of polarity on the polymer surface shunts small analytes to the more hydrophobic center of the polymer bead, where they are retained before the washing and elution steps. Plexa provides these performance enhancements due to a unique polymeric architecture with a nonretentive, hydroxylated, amide-free surface, and a nonpolar PS-DVB core for retaining small molecules. Binding of proteins and lipids on the polymer surface is minimized, resulting in cleaner samples and reduced matrix interference. The performance features operate at the sample loading step, making them largely method independent. Plexa is ideal for high-throughput tests requiring validated performance with minimal method development. The standard nonpolar retention mechanism is applicable to almost any analyte type.

#### Typical Matrices

Plasma, urine, biological fluids, and aqueous samples

#### Primary Extraction Mechanism

Nonpolar

#### Compound Types

Nonpolar compounds with acidic/neutral fractionation, for example, PAHs from water

## Selected Organic Contaminants Using Agilent Bond Elut Plexa Cartridges

EPA Method 540: Selected Organic Contaminants Using Agilent Plexa Cartridges and the Agilent 6460 Triple Quadrupole LC/MS (publication number, 5991-5594EN)

Step	Procedure
Condition	5 mL methanol followed by 10 mL reagent water
Sample	4 to 5 mL reagent water followed by sample
Rinse	5 mL reagent water
Dry	5 minutes at 10 to 15 inches Hg of vacuum
Elution	2 mL methanol (use vacuum to start flow, stop vacuum and wait for 5 minutes). Add 3 mL methanol, continue elution
Concentration	Add ISTD to extract and concentrate the extract using nitrogen evaporation to ~1 mL. Vortex to rinse walls of tube
Make up	Transfer extract to an LC vial and add reagent water to the top of the vial label (~1.7 mL total volume)

EIC of quantifier ions for the 12 target compounds in the final EPA Method 540, plus the five compounds that were dropped from the EPA Draft Method 540 (marked with an \*), as well as two surrogates, and two internal standards.

## Bond Elut Plexa PCX

### Polymeric Cation Exchange for Simplified SPE

- Faster flow rates improve productivity
- Extraction cleanliness and reduced interference improve precision
- Simplified single method for ease-of-use

Bond Elut Plexa PCX is another milestone in the development of simple and robust SPE methods. Plexa PCX uses a polymeric cation exchange resin that combines the outstanding properties of Bond Elut Plexa—superior flow characteristics and improved analytical performance—with strong cation exchange functionalities. This mixed mode SPE sorbent removes neutral and acidic interferences from the matrix, concentrates basic analytes, and improves sensitivity in the determination of basic compounds.

The Plexa PCX particles are near monodispersed, resulting in homogenous packing. Reproducible results are produced as standard, with very good tube-to-tube and well-to-well performance. Ion suppression is reduced because the highly polar, hydroxylated polymer surface is entirely amide-free and does not provide binding sites for endogenous species, such as proteins and lipids.

Plexa PCX comes with a simple, single method approach for basic drugs, which offers improved recoveries, cleaner extracts, and reduced method development time and cost. The flow rate is improved because Plexa PCX particles have much narrower particle size distribution with no fines to cause blockages.

## Bond Elut Plexa PAX

- Mixed mode, nonpolar polymeric anion exchanger offers a high level of analyte selectivity
- Exclusion of endogenous interferences provides superior cleanliness and minimizes ion suppression
- Simple, single method for ease-of-use, reduces method development time

Bond Elut Plexa PAX is a polymeric anion exchange product (PAX) that sets the performance standard in analyte cleanup and reproducibility for polar and nonpolar acidic analytes. Existing polymeric anion exchange sorbents can exhibit various ion-exchange capacities from batch to batch, leading to method irreproducibility and compromised data. Plexa PAX particles are functionalized using a proprietary process, which allows anion-exchange loadings to be controlled with a high degree of reproducibility, giving more robust performance across the lifetime of your compound study or method.

This Plexa PAX polymeric mixed mode SPE product comes with a simple, single method for nonpolar acidic and polar acidic analytes that offers excellent cleanup, even in complex matrices such as plasma. The optimized anion-exchange methodology provides clean extracts, high recoveries and low RSDs, reducing method development time, sample repeats, and overall cost-per-sample in the process.

### Typical Matrices

Plasma, urine, biological fluids, and aqueous samples

### Primary Extraction Mechanism

Mixed mode: nonpolar and anion exchange

### Compound Types

Acidic compounds, carboxylic acid metabolites of drugs, peptides, and amino acids

**Typical Method for Bond Elut  
Plexa PAX****Sample:**

## Reversed Phase Polymeric SPE

### Bond Elut PPL

- Modified styrene-divinylbenzene polymer
- Large particle size allows fast extraction speeds
- High surface area and capacity for polar analytes

Bond Elut PPL is a styrene-divinylbenzene (SDVB) polymer that is modified with a proprietary surface. PPL will retain even the most polar classes of analytes, including phenols. The large particle size allows ease-of-flow for viscous or particulate-rich water samples, while the high surface area and strong hydrophobicity ensure reproducible extractions with high recoveries upon elution.

Bond Elut PPL is suitable for methods such as the US EPA Method 528, *Determination of Phenols in Drinking Water by SPE and Capillary GC/MS*.

Water sources, biological fluids

### Primary Extraction Mechanism

Nonpolar, electrostatic

### Compound Types

Polar compounds, phenols

## Bond Elut ENV

### Typical Matrices

Water sources

### Primary Extraction Mechanism

Nonpolar

### Compound Types

Polar organic molecules, explosive residues

- Unfunctionalized polystyrene-divinylbenzene polymer
- Large particle size allows fast extraction speeds
- High surface area and capacity for polar analytes
- Large average pore size (450 Å) for more efficient extraction of large molecules, such as explosives

Bond Elut ENV, a PS-DVB polymer, is designed for the extraction of polar organic residues. It contains 125 µm spherical particles, advantageous for high volume, fast flowthrough applications.

## Bond Elut LMS

- Ultraclean styrene-divinylbenzene polymer
- Optimized 75 µm particle size for reproducible flow
- High capacity and surface area for efficient extraction

Bond Elut LMS polymeric sorbent lets you elute without having to add amine modifiers, buffers, or acids. The elimination of secondary interactions means that elution of analytes can be achieved with pure organic solvents, or solvent mixtures of low ionic strength compatible with the HPLC mobile phase. These characteristics allow easy compatibility with LC/MS or other delicate analytical techniques.

### Typical Matrices

Urine, plasma, biological fluids

### Primary Extraction Mechanism

Nonpolar

### Compound Types

Nonpolar compounds

Horse urine, urine, biological fluids

### Primary Extraction Mechanism

Nonpolar

Polar (NEXUS WCX)

### Compound Types

Drugs of abuse, quaternary drugs, endocrine disruptors

### Bond Elut NEXUS and Bond Elut NEXUS WCX

- Large particle size allows excellent flow for viscous samples
- Nonconditioning method saves time and improves throughput
- WCX offers enhanced selectivity for certain analytes such as quaternary amine drugs

Bond Elut NEXUS is an ultraclean polymeric sorbent that has bimodal porosity and a high surface area. NEXUS offers a nonpolar retention mechanism with no preconditioning required. The large particle size makes NEXUS ideal for extractions from highly viscous samples, such as horse urine.

Based on the same base polymer technology, Bond Elut NEXUS WCX is a weak cation exchange sorbent that offers extra selectivity for analytes such as quaternary ammonium drugs and anabolic steroids.

# Silica-Based SPE

## Reversed Phase (Nonpolar) Silica SPE

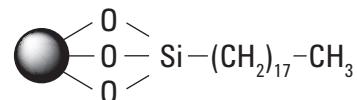

Reversed-phase sorbents are nonpolar and are used to retain (extract) nonpolar analytes from polar matrices. For reversed-phase sorbents, retention decreases as the eluting solvent becomes more nonpolar.

### Bond Elut C18

- The most hydrophobic, bonded silica sorbent
- Extremely retentive for nonpolar compounds
- Effective for desalting aqueous mixtures

Bond Elut C18 is the most hydrophobic, bonded silica sorbent in the Bond Elut range. It is the most popular SPE sorbent because of its retentive nature for nonpolar compounds. C18 is generally regarded as having the broadest spectrum of retention among bonded silica sorbents, since it retains most organic analytes from aqueous matrices. When analyzing small-to-intermediate molecules, Bond Elut C18 can be used for desalting aqueous matrices before ion exchange, as salts pass through the sorbent unretained.

#### Typical Matrices

Aqueous samples, biological fluids

#### Primary Extraction Mechanism

Nonpolar

#### Compound Types

Nonpolar compounds, desalting

## Bond Elut C18 OH

- Silanol activity permits metabolite fractionation
- Tight QC tolerances deliver batch-to-batch reproducibility
- 150 Å pore size expands utility to higher molecular weight compounds

Bond Elut C18 OH is a nonendcapped version of the octadecyl bonded phases that enables the silanols on the silica surface to be more active. This low-load C18 has well-controlled silanol activity that permits the fractionation of metabolites and enhances retention of basic compounds, compared to an endcapped C18.

### Primary Extraction Mechanism

Nonpolar, hydrogen bonding

### Compound Types

Vitamin D, fat-soluble compounds, steroids/hormones

**Typical Matrices**

Aqueous samples, biological fluids

**Primary Extraction Mechanism**

Nonpolar

**Compound Types**

Nonpolar compounds

**Bond Elut C8**

- Excellent for strongly retained analytes
- Polar interactions are not significant
- Less retentive than C18

Bond Elut C8 has very similar properties to C18, but is not as retentive for nonpolar compounds due to its shorter hydrocarbon chain. This results in reduced carbon loading. C8 is an excellent replacement for C18 when analytes are too strongly retained for effective elution. The potential for polar interactions is higher than in C18 because there is less coverage of the silica surface. These polar interactions are not, however, a significant property of C8.

**Bond Elut C8**

## Bond Elut CH (cyclohexyl)

- Nonpolar CH with polarity similar to C2
- Retains polar analytes from aqueous matrices
- Good choice when common nonpolar sorbents do not provide the required selectivity

Bond Elut CH is a midpolarity sorbent that exhibits unique selectivities for certain analytes. When employed as a nonpolar sorbent, CH has the approximate polarity of a C2 sorbent. Bond Elut CH is often a good choice when nonpolar sorbents, such as C18, C8, or C2, do not provide the desired selectivity.

### Typical Matrices

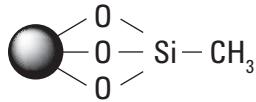

Aqueous samples, biological fluids

### Primary Extraction Mechanism

Nonpolar

### Compound Types

Nonpolar compounds

**Typical Matrices**

Urine, plasma, biological fluids

**Primary Extraction Mechanism**

Nonpolar, polar (as a normal phase extraction)

**Compound Types**

Strongly nonpolar compounds

**Bond Elut C1**

- Least retentive of all alkyl group bonded phases
- Easy retention and release of polar compounds
- Easy retention and release of multifunctional compounds

As a result of the methyl group and subsequent low carbon load, Bond Elut C1 is the least retentive of all alkyl group bonded phases for nonpolar compounds. However, due to the extensive endcapping of this sorbent to mask polar silanol activity, retention and elution of polar and multifunctional analytes can still be achieved.

**Bond Elut C1**

Description	Unit	Part No.
<b>Straight Barrel Cartridges</b>		
100 mg, 1 mL	100/pk	12102004
100 mg, 3 mL	50/pk	12102090
500 mg, 3 mL	50/pk	12102031

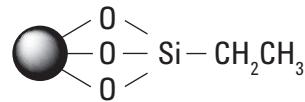

## Bond Elut C2

- Low carbon load sorbent
- Can be used alongside CN and C8 phases
- Popular for drug extraction from plasma and for flat baselines

Bond Elut C2 is a fairly nonpolar sorbent because of the short chain length of the functional group. C2 is often used during the process of method development if analytes are retained too strongly on a C8 or C18 phase. The polarity of C2 is slightly lower than a cyano phase for polar interactions.

### Bond Elut C2

#### Primary Extraction Mechanism

Nonpolar

#### Compound Types

Strongly nonpolar compounds

## Normal Phase (Polar) Silica SPE

Normal phase sorbents are polar and used to retain (extract) polar analytes. For normal phase sorbents, retention decreases as the eluting solvent becomes more polar.

### Typical Matrices

Nonpolar organics, oils, lipids

### Primary Extraction Mechanism

Polar

### Compound Types

Cleanup of polar impurities

## Bond Elut SI

- Highly polar phase retains polar molecules from nonpolar matrices
- High-purity silica
- Separate compounds with very similar structures

Native silica is generally regarded as the most polar SPE sorbent available. Bond Elut SI is effective at separating compounds with very similar structures. Applying the analytes in a nonpolar solvent, then increasing the solvent polarity by increasing the concentration of a polar modifier, such as THF or ethyl acetate, delivers effective separations.

## Bond Elut Cyano (CN)

- Ideal for extracting aqueous analytes
- Retention in aqueous and organic matrices
- Useful for many applications

A medium polarity sorbent with many uses, Bond Elut Cyano (CN) SPE products are available as either endcapped (CN-E) or unendcapped (CN-U) versions. Both the Bond Elut CN-E and Bond Elut CN-U products are available in a 40 µm particle size. Bond Elut CN-E is ideal for applications in which extremely nonpolar compounds would be irreversibly retained on high carbon load sorbents, such as C8 and C18. This endcapped version of the cyano sorbent is best used when extracting analytes from an aqueous matrix. Bond Elut CN-U is a good choice for very polar analytes that may be irreversibly retained on SI or Diol (2OH) SPE phases. Bond Elut CN-U is ideally suited for the extraction of polar compounds from a nonpolar matrix, such as hexane or oils.

### Typical Matrices

CN-E: aqueous samples,  
biological fluids  
CN-U: oils, hexane

### Primary Extraction Mechanism

CN-E: nonpolar  
CN-U: polar, dipole

### Compound Types

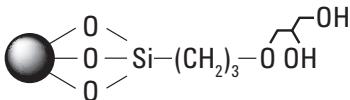

CN-E: very nonpolar compounds  
CN-U: very polar compounds

**Primary Extraction Mechanism**

Polar and nonpolar

**Compound Types**

Polar, weakly nonpolar

**Bond Elut Diol (20H)**

- Provides polar and nonpolar modes
- Strong hydrogen bonding with analytes
- Resembles unbonded silica in its capabilities

Bond Elut Diol resembles unbonded silica in its tendency for strong hydrogen bonding with analytes. 20H can also be employed in the nonpolar mode because the hydrocarbon spacer on its functional group provides enough nonpolar character for retention of hydrophobic analytes. Bond Elut Diol is a listed SPE device for the DIN 14333-1 method on benzimidazole fungicides.

## Bond Elut NH<sub>2</sub> (Aminopropyl)

- Normal phase or anion exchange sorbent
- Weaker anion exchange than SAX
- Amenable to separating structural isomers

Bond Elut NH<sub>2</sub> is a weaker anion exchanger than sorbents such as SAX (a quaternary amine sorbent that is always charged). It is therefore a better choice for retention of very strong anions, such as sulfonic acids, which may retain irreversibly on a SAX sorbent. Similar to Diol and SI sorbents, Bond Elut NH<sub>2</sub> is excellent for the separation of structural isomers.

### Typical Matrices

Aqueous samples, biological fluids, buffered organics

### Primary Extraction Mechanism

Weak anion exchange

### Compound Types

Polar and nonpolar strong anions, polar structural isomers

## Ion Exchange Silica SPE

Ion exchange phases are more dependent on pH, ionic strength, and counterion strength than on solvent strength. These phases depend on ionic interactions as the primary retention mechanism.

## Bond Elut SAX

- Retains compounds that elute from weak anion exchange sorbents
- Selectivity can be user-modified for increased flexibility
- Minimal nonpolar interactions

Bond Elut SAX is a strong anion exchange sorbent ideally suited for the extraction of compounds, such as carboxylic acids, which may not retain effectively on weak anion exchange sorbents.

## Bond Elut SCX

- Useful for compounds with both cationic and nonpolar characteristics
- Superior cleanup from a single sorbent
- Very low pKa ligand elicits strong analyte interaction

Bond Elut SCX is a strong cation exchanger with a very low pKa. Although the pKa is similar to Bond Elut PRS, the presence of the benzene ring in the functional group increases the potential for nonpolar interactions. This nonpolar characteristic becomes particularly important when conducting ion exchange from aqueous systems, where selectivity towards compounds exhibiting cationic and nonpolar character is seen.

### Typical Matrices

Aqueous samples, biological fluids, buffered organics

### Primary Extraction Mechanism

Strong cation exchange

### Compound Types

Weak basic compounds

## Bond Elut PRS

- Strong cation exchange sorbent, also capable of polar and hydrogen bonding interactions
- No appreciable nonpolar interactions
- Unique selectivity properties

Bond Elut PRS is a strong cation exchange sorbent that is also relatively high in polarity. With no appreciable degree of hydrophobicity in nonpolar solvents, PRS is capable of polar and hydrogen bonding interactions. Due to the very low pKa of PRS, it is recommended for weaker cationic species, such as pyridinium compounds.

Weak anion exchange

**Compound Types**

Acidic compounds (fruit acid removal for QuEChERS)

**Bond Elut PSA**

- Alternative choice to Bond Elut NH<sub>2</sub> for polar compounds
- Higher ionic capacity than NH<sub>2</sub>

Bond Elut PSA is an alkylated amine sorbent that contains two different amino functionalities—one secondary and one primary. This gives a slightly higher pKa and ionic capacity compared to Bond Elut NH<sub>2</sub>. PSA has a significantly higher carbon load than most amino functional sorbents, making it a better choice for polar compounds that retain too strongly on Bond Elut NH<sub>2</sub>.

**Bond Elut PSA**

## Bond Elut CBA

- Cation exchange with no need for extreme basic conditions
- Wider selectivity range provides more eluent options
- Polar or nonpolar depending on matrix or solvent

CBA is a midpolarity sorbent and weak cation exchanger ( $pK_a$  4.8). It can be used with a wider range of counterions than lower  $pK_a$  sorbents like SCX, and will demonstrate easier elution of quaternary amine functionalized analytes.

### Typical Matrices

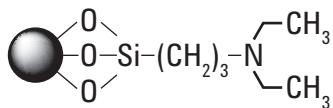

Aqueous samples, biological fluids

### Primary Extraction Mechanism

Weak cation exchange

### Compound Types

Strong and weak bases

**Typical Matrices**

Water, biological fluids, nonpolar extracts

**Primary Extraction Mechanism**

Weak anion exchange

**Compound Types**

Weak and strong acidic compounds

**Bond Elut DEA**

- Weak anion exchanger
- More polar than C8 but less polar than C2 or CN
- Alkyl side chains confer moderately nonpolar characteristics

Bond Elut DEA bears some resemblance to Bond Elut NH<sub>2</sub> in its properties, but with a slightly lower capacity as an anion-exchange sorbent. DEA has a moderately nonpolar character due to the alkyl side chains on the amino functionality. These groups still afford a medium level of polarity, higher than C8, but less polar than C2 or CN-E.

**Bond Elut DEA**

## Mixed Mode Silica SPE

### Bond Elut AccuCAT

- SCX and SAX functionalities offer broad analyte extraction potential
- Ultraclean, mixed sorbent bed delivers reproducible extractions
- Compatible with many biological fluids for easy method transfer

Bond Elut AccuCAT cartridges are mixed bed SPE cartridges, consisting of a strong cation exchange (SCX) and a strong anion exchange (SAX) sorbent packed into one bed. AccuCAT is effective for the extraction of acidic, basic, and neutral analytes from urine and other biological samples. AccuCAT is particularly effective for catecholamine extraction from biofluids.

### Bond Elut AccuCAT

Urine, plasma and biological fluids, beverages and food

#### Primary Extraction Mechanism

Strong cation and anion exchange

#### Compound Types

Catecholamines, acrylamide in liquids and food

**Typical Matrices**

Urine, plasma, saliva, blood,  
biological fluids

**Primary Extraction Mechanism**

Nonpolar and strong cation  
exchange

**Compound Types**

Basic drugs, basic drugs of  
abuse

**Bond Elut Certify**

- Special mixed mode sorbent bed
- Broad application range for aqueous extraction
- Bimodal, nonpolar, and strong cation exchange

The Bond Elut Certify extraction cartridge is a mixed mode sorbent containing nonpolar and C8 strong cation exchanger functionalities. Certify is most commonly used to extract basic (cationic) drugs from urine and blood, but is also effective for the extraction of many compounds from a diverse range of aqueous matrices. Rely on the Certify products for consistent performance and availability in various formats to support automation and high sample throughput.

Tubes need to be inserted into a VersaPlate base plate, p/n 75400000.

## Bond Elut Certify II

### Typical Matrices

Urine, plasma, saliva, blood, biological fluids

### Primary Extraction Mechanism

Nonpolar and strong anion exchange

### Compound Types

Acidic drugs, acidic drugs of abuse

- Ideal for nonpolar and anionic compounds
- Optimized for acidic drug analysis
- Bimodal, nonpolar, and strong anion exchange

Bond Elut Certify II is designed for the rapid and effective extraction of acidic drugs and metabolites from urine and other biological matrices for forensic use. Certify II is a mixed mode cartridge with nonpolar C8 and strong anion exchange (SAX) functionalities. It has been optimized for acidic drugs such as 11-nor-delta-9-tetrahydrocannabinol-carboxylic acid, salicylic acid, ibuprofen, acetaminophen and other compounds that possess both nonpolar and anionic characteristics.

# Inorganic SPE

The following SPE phases have varying degrees of polarity and surface acidity or basicity. They are primarily used to retain polar analytes. For these phases, analyte retention generally decreases as the solvent becomes more polar.

## Bond Elut Florisil (FL)

- Pesticide Residue (PR) grade
- For cleanup of polar interferences from nonpolar samples
- Economical
- Fast flow, ideal for viscous samples

Florisil is a magnesia-loaded silica gel. Like silica, it is extremely polar in nature and ideal for the isolation of polar compounds from nonpolar matrices. The larger particle size of the sorbent enables fast flow for large sample volumes, and is therefore an attractive alternative to silica if the sample matrix is particularly viscous.

### Typical Matrices

Nonpolar organics

### Primary Extraction Mechanism

Polar compounds

### Compound Types

Organic extracts, nonpolar environmental extracts

## Bond Elut Alumina

### Typical Matrices

Nonpolar organics

### Primary Extraction Mechanism

Polar

### Compound Types

Polar cleanup

- Available in acidic (A), basic (B), and neutral (N) formats
- High extraction efficiency
- Better high pH stability than unfunctionalized silica

Alumina, like silica, is an extremely polar sorbent. The alumina surface tends to be slightly more stable under high pH conditions than unfunctionalized silica. The small particle size of the Bond Elut Alumina range ensures high extraction efficiency, even when small bed masses are used.

## Bond Elut Sodium Sulfate Drying Cartridges

- Highly effective prepacked dessicant
- Clean ACS grade, anhydrous sodium sulfate
- Prepacked for convenience

Simplify sodium sulfate mediated drying steps by using cartridges prepacked with ACS grade, granular anhydrous sodium sulfate. Available in three formats (LRC, Bond Elut Jr, and straight barrels).

Bond Elut Jr cartridges have top and bottom Luer fittings, allowing for easy sample processing when used with standard SPE cartridges. Bond Elut LRC cartridges have a large reservoir above the sorbent bed and are suitable for use on any standard SPE vacuum manifold.

# Mega Bond Elut

- Convenient disposable cartridges eliminate the need for packing glass columns
- Flexible "open" tube design for either liquid or solid samples
- Reliable, consistent flow characteristics deliver high-resolution performance

Mega Bond Elut Flash cartridges offer excellent levels of performance and productivity for the purification of organic compounds, and also for scale-up, solid phase extraction. Prepacked, disposable cartridges offer greater convenience than glass columns that require washing, drying, and repacking after every sample.

Mega Bond Elut C18 cartridges, 12256060

# Specialty SPE

## Typical Matrices

Organic plant and tissue extracts

## Primary Extraction Mechanism

Wide range nonpolar retention

## Compound Types

Cleanup of pigments and endogenous plant extracts for pesticide and herbicide analysis

## Bond Elut Carbon

- Excellent retention for small organics, including those that are too polar to retain on C18 or polymeric SPE
- Removal of chlorophyll and other pigments leads to fewer chromatographic or mass interferences
- Broader retention and easier elution of analytes across the polarity range, for improved multiresidue analysis

Bond Elut Carbon cartridges are packed with ultrapure graphitized carbon particles that have been optimized for the absorption of pigments in food, fruits, vegetables, and small organic residues in wastewater. The powerful retention mechanisms of these products are appropriate for a broad range of analytes. In addition, careful manufacturing techniques result in lower carbon fines on the wall of the device.

## Bond Elut Cellulose

- High-purity microgranular cellulose with high  $\alpha$ -cellulose content
- Stable across a broad pH range
- Extremely low metal content (Fe, Cu <5 ppm)

Bond Elut Cellulose cartridges use a pure microgranular cellulose powder that is packed between two 20  $\mu\text{m}$  polypropylene frits. The cellulose phase is very stable over a wide pH range with extremely low metal content. The combination of surface area and polymeric structure results in a sorbent with excellent capacity. The cellulose media contains numerous hydroxyl groups; because of its polar nature, it is able to accept high loading of many polar substances from aqueous and organic phases.

### Typical Matrices

Aqueous samples and nonpolar organics

### Primary Extraction Mechanism

Polar (Hydroxyl)

### Compound Types

Polar impurities/compounds

## Bond Elut Cellulose

Description	Unit	Part No.
<b>Straight Barrel Cartridges</b>		
300 g, 3 mL	500/pk	12102095

## Bond Elut PCB

- Optimized bed mass affords excellent extraction reproducibility
- Special dual-phase enhances PCB selectivity
- All extractions can be completed with one solvent to simplify procedures

Bond Elut PCB is a specially designed sorbent that allows for the easy extraction of polychlorinated biphenyl (PCB) compounds from various matrices. Desired analytes can be loaded and eluted using a simple, single solvent method before analysis by GC/ECD.

### Typical Matrices

Water sources

### Primary Extraction Mechanism

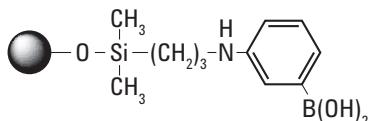

Polar

### Compound Types

PCBs

**Primary Extraction Mechanism**

Covalent bonding

**Compound Types**

Cis-diol-containing compounds, catecholamines, ribonucleotides, amino alcohols, diketo and triketo compounds

**Bond Elut PBA**

- Unique phenylboronic acid sorbent
- High specificity for cis-diol compounds
- Amenable to a broad range of biomolecule applications

Bond Elut PBA is a unique silica SPE sorbent containing a phenylboronic acid functionality that can retain analytes via a reversible covalent bond. This very strong covalent retention mechanism enables high specificity and cleanliness. The boronate group has a strong affinity for cis-diol-containing compounds such as catechols, nucleic acids, some proteins, carbohydrates, and PEG compounds. Amino alcohols, alpha-hydroxy amides, keto compounds, and others can also be retained.

**Bond Elut PBA**

Pesticide and industrial chemical residues

## Online SPE (PLRP-S)

- A polymeric reversed-phase sorbent that is hydrophobic, with no bonded phase or alkyl ligands. This makes PLRP-S a flexible sorbent to use as a starting point for online SPE applications
- Suitable for applications with target compounds over a wide range of chemical properties
- PLRP-S online SPE cartridges use 15 µm PLRP-S
- Designed for use with the ZORBAX guard column hardware kit (p/n 820999-901)
- Very stable sorbent bed to support flow reversal
- Available in 4.6 mm id x 12.5 mm length or 2.1 mm id x 12.5 mm length
- Three cartridges per pack
- Maximum gradient pressure is 250 psi

Bond Elut Online SPE, PLRP-S, 5982-1271

### **Online SPE (PLRP-S)**

Description	Part No.
Bond Elut Online SPE, PLRP-S, 4.6 x 12.5 mm	5982-1270
Bond Elut Online SPE, PLRP-S, 2.1 x 12.5 mm	5982-1271

# Solid Phase Microextraction

Solid phase microextraction (SPME) is a technique for extracting analytes from solid, liquid, or gaseous samples by adsorbing them onto the SPME fiber and then desorbing them into an inlet, either on a gas chromatograph (GC) or an HPLC system. SPME is amenable to automation using an autosampler or it can be performed manually. Agilent offers SPME fibers in a range of chemistries, formats, and for use with autosamplers or manual injections. Kits are also available to support method development, offering various fiber types and configurations within a single kit.

## Solid Phase Microextraction Fibers

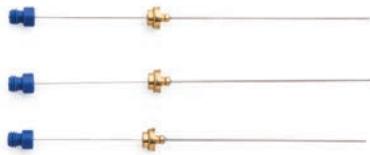

When ordering SPME fibers, note that the fiber kits contain only the fibers. For a first-time order, you will also need to order the appropriate fiber holder for your needs. SPME fibers can be used multiple times depending on the application and if treated with the proper care and caution. Each fiber has a color-coded or notched hub indicating the type of coating on the fiber.

Inlet	Use	Description	Fiber Length (cm)	Fiber Coating (df) – $\mu\text{m}$	Gauge	Fused Silica or Metal Alloy Part No.	StableFlex Part No.

## Solid Phase Microextraction Kits

SPME Fiber kits contain three fibers. Note that the fiber coating thickness (df) is expressed in m, and when multiple phase types are included in a kit, the fiber coatings are listed in the respective order that the phases are listed in the description.

### Solid Phase Microextraction Kits

Inlet	Use	Description	Fiber Coating (df) – µm	Fiber Length (cm)	Gauge	Quantity	Part No.
Septum	Autosampler	Kit 1: Polyacrylate, PDMS, PDMS; for volatiles and semivolatiles – A/S	85, 100, 7	1	24	3	391896308
		Kit 2: Carboxen/PDMS, PDMS/DVB, and polyacrylate; for volatiles or polar organics – A/S	75, 65, 85	1	24	3	SU57321U
		Kit 3: PDMS/DVB, polyacrylate, PDMS; for HPLC – A/S	60, 85, 100	1	24	3	SU57323U
		Kit 4: PDMS, PDMS/DVB and Carboxen/PDMS; for flavors and odors – A/S	100, 65, 75	1	24	3	SU57325U
		StableFlex Fiber kit: PDMS/DVB, DVB/Carboxen/PDMS, Carboxen/PDMS and Polyacrylate – A/S	65, 50/30, 85, 85	1 and 2	24	4	SU57551U
	Manual	Kit 1: Polyacrylate, PDMS, PDMS; for volatiles and semivolatiles – manual	85, 100, 7	1	24	3	391896307

# Microvolume SPE

## OMIX Tips

- Fast, uniform flow maximizes productivity and reproducibility
- Minimal peptide losses lead to higher recoveries
- Available in three phases and sizes to deliver better sequence coverage

Omix tips tray, A57009MB

OMIX tips with monolithic sorbent tip technology offer dependable purification and superior results in proteomics research. Agilent OMIX pipette tips reliably purify and enrich femtomole and picomole levels of peptides and proteins before MALDI-TOF or LC/MS/MS. The unique monolithic sorbent technology used in OMIX consistently outperforms other tips by delivering uniform flow and strong analyte-to-surface interactions. The high binding capacity of OMIX delivers high productivity—the 10 µL tips bind up to 8 µg of peptide—twice as much as tips from other suppliers. The superior flow and exceptional binding capacity of OMIX ensure reliable recovery of your peptides, minimizing peptide loss during multi-aliquot, multitip, and evaporation steps.

# Disk SPE Formats

## Bond Elut SPEC SPE

Using an advanced disk design, Bond Elut SPEC delivers superior flow characteristics and trouble-free automation. Due to the low volume of the extraction bed, very low elution volumes can be used. This means that, in some applications, the evaporation and reconstitution steps can be eliminated, resulting in accelerated sample processing times. The combination of low bed masses, ultraclean base materials, and a broad toolbox of selectivities delivers higher recoveries, free of the matrix interferences that can cause ion suppression.

SPEC provides high recoveries at low elution volumes—as low as 100 µL. This is due to the high surface area yet small physical volume of the monolithic disk. Overall, extraction efficiency is very high for this format of sample preparation product, and the range of functionalities allows fast method development. SPEC extraction methods are typically shorter and require less reagent and solvent than other SPE methods, for lower costs and greener operation.

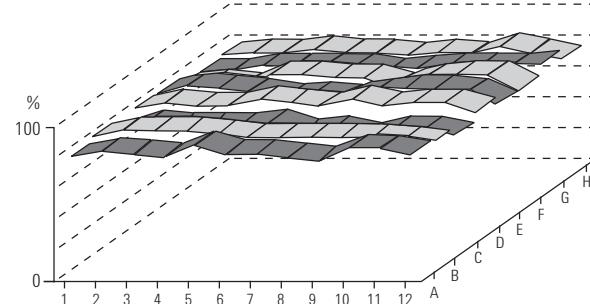

SPEC 47 mm disks and SPEC SPE cartridges,  
A74702

## Unique phases available in SPEC 96-well and SPE tube formats

### Uniform recovery and reproducibility between wells from the same well plate

- **DAU**—This functionalized SPEC disk is designed for the forensic analysis of drugs in urine. Its unique sorbent chemistry results in excellent sample cleanup and concentration of samples before GC/MS and LC/MS.
- **MP1**—SPEC MP1 is a mixed mode, nonpolar/SCX monolithic disk, ideal for analytes with polar functional groups in plasma. The dual retention mechanism results in cleaner extracts. The SCX functionality strongly binds polar basic analytes, allowing rigorous washing steps to be employed. Bond Elut Certify offers similar selectivity to SPEC MP1.
- **MP3**—SPEC MP3 is slightly more polar than MP1, making it ideal for hydrophobic analytes that would bind too strongly to MP1. MP3 chemistry is particularly suited to the extraction of opiate alkaloids from biological fluids.

**NOTE:** The high recovery (y axis) has an average deviation across the 96 wells of just 3.2 % (well positions are shown on the x and z axes). SPEC provides the predictable flow characteristics analysts require for true walk-away automated processing. With SPEC, you do not need to worry about clogging, and as an added benefit, the typically low vacuum pressure requirement prevents cross-talk (for example, spraying of fast running eluates between wells in the collection plate).

## SPEC 96-Well Plates

When used on an automated platform, SPEC 96-well plates offer outstanding flow characteristics. Flow across all 96-well plates is uniform and highly reproducible, meaning your recoveries are too.

## Bond Elut Accessories

- Made with high-purity polypropylene for cleaner extracts
- Uniform batch-to-batch size for consistent performance
- Economical for every day use

Many empty reservoirs are available for packing custom SPE cartridges with bulk Bondesil sorbents or other desired sorbents. Cartridges are available from 1 to 60 mL. Order frits separately, or see the table for reservoirs with preinstalled frits.

### Bond Elut Accessories

Volume (mL)	Unit	Part No.
1	100/pk	12131007
3	100/pk	12131008
6	100/pk	12131009

Empty SPE cartridges with two frits  
(preinserted), 20 mL, 12131017

## Bond Elut Empty SPE Cartridges with Two Frits

- Preinstalled frits for ease-of-use
- Broad range of filtration operations for maximum flexibility
- Customizable packing for specific applications

These clean polypropylene reservoirs contain two 20 µm preinserted polyethylene frits, an ideal configuration for simple filtration. For custom sorbent packing, extra frits can be bought separately. Available from 1 to 60 mL.

### Bond Elut Empty SPE Cartridges with Two Pre-Installed Frits

Volume (mL)	Unit	Part No.
1	100/pk	12131013
3	100/pk	12131014
12	100/pk	12131016
20	100/pk	12131017
60	100/pk	12131018

### Large Reservoir Capacity (LRC) Cartridge

60	100/pk	131005
----	--------	--------

## 20 µm Polyethylene Frits for SPE Cartridges

- Made with high-grade, clean polyethylene for clean extracts
- Precut to correct size for accuracy
- Use with reservoirs or custom packing

These frits are precut to fit into Bond Elut reservoirs for use in filtration applications or for custom SPE sorbent packing.

Polyethylene Frits, 12131021

### 20 µm Polyethylene Frits for SPE Cartridges

Diameter (mm)	To Fit Tube Size (mL)	Unit	Part No.
6.4	1	100/pk	12131019
9.5	3	100/pk	12131020
12.7	6	100/pk	12131021
15.9	12	100/pk	12131022
20.6	20	100/pk	12131023
27.0	60	100/pk	12131024

## Bond Elut Adapters

- Connect SPE cartridges in series for large samples
- Expand cartridge volume for even more applications
- Transfer large-volume samples to any SPE cartridge

### Bond Elut Adapters

Description	Unit	Part No.
Adapter cap for 1, 3, and 6 mL Bond Elut cartridges	15/pk	12131001
Adapter cap for LRC 12, and 20 mL Bond Elut cartridges	10/pk	12131003
Adapter cap for 60 mL Bond Elut cartridges	10/pk	12131004

## Bond Elut Adapter Configurations

**Configuration 1:** Stack two cartridges to perform multisorbent methods.

**Configuration 2 + 3:** Increase the volume of any cartridge by stacking an empty reservoir on top of the device.

**Configuration 4:** Standard Luer-tipped syringes will fit into any Bond Elut adapter. Gentle pressure can then be used to apply conditioning solvents, samples, rinsing solvents and eluents. This configuration is particularly useful for single sample processing, where a vacuum manifold is not required.

**Configuration 5:** For excessively large sample volumes, 0.12 inch od tubing can be connected to the end of an adapter and the sample can be drawn directly from the sample container via high vacuum.

## Adapter Caps for Gilson ASPEC SPE Systems

- Enhance the high-throughput compatibility of Bond Elut cartridges
- Convert 1 and 3 mL cartridges for use in Gilson SPE systems
- Specially engineered for leak-free operation

Gilson-engineered caps produce a positive pressure seal with the needle in Gilson ASPEC, ASPEC XL, and ASPEC XL4 solid phase extraction systems.

Gilson adapter cap, 12131034

### Adapter Caps for Gilson ASPEC SPE Systems

Description	Unit	Part No.
Gilson adapter cap, 1 mL	1000/pk	12131034
Gilson adapter cap, 3 mL	1000/pk	12131035
Gilson adapter cap, 6 mL	1000/pk	12131036

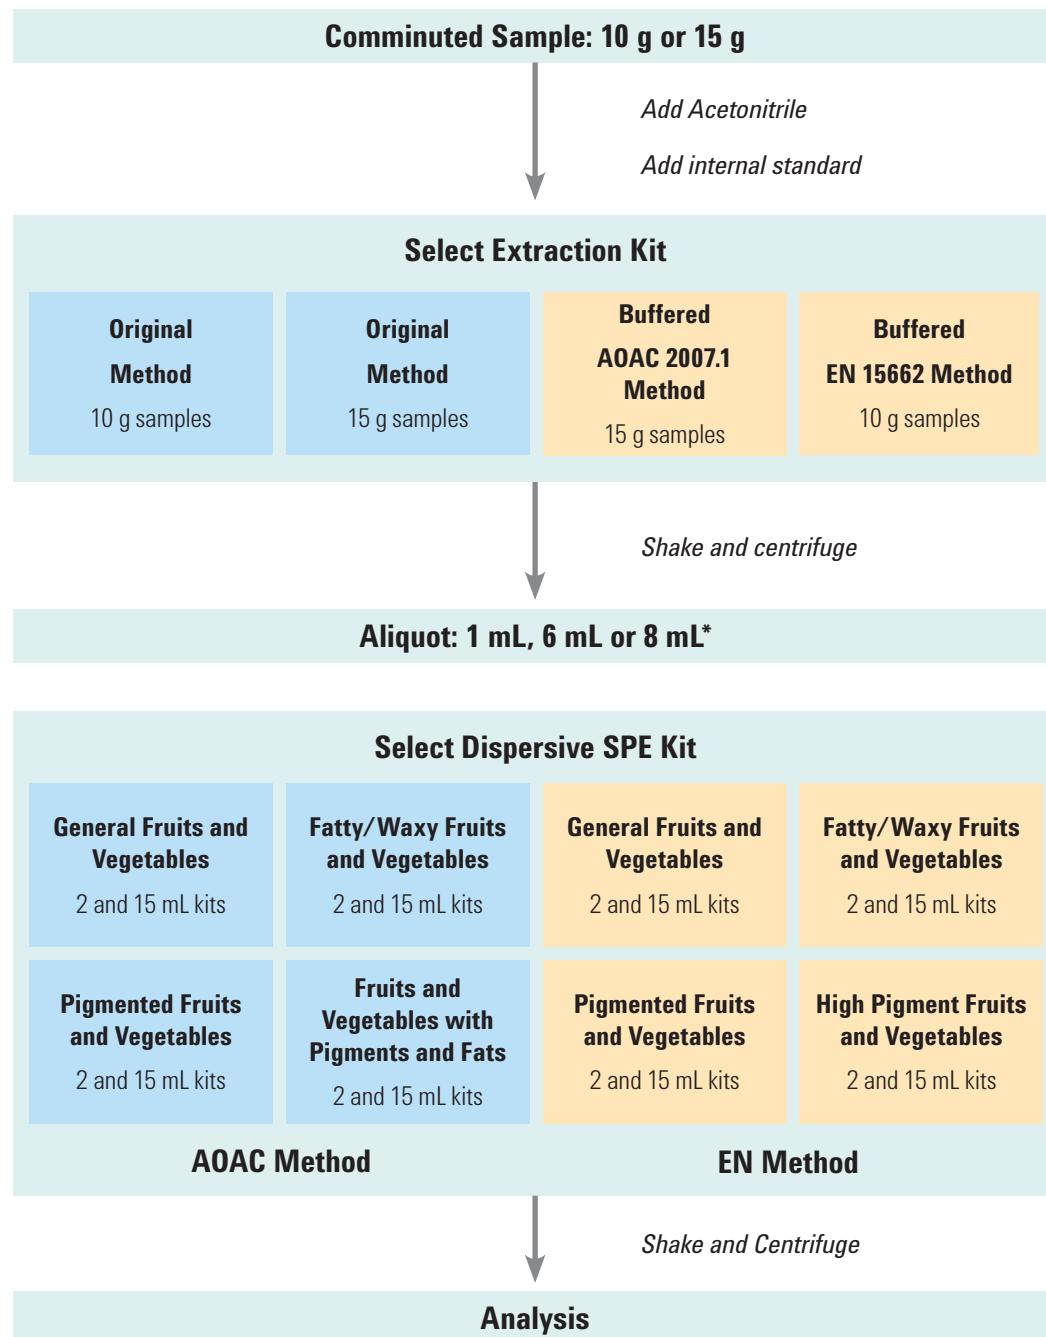

## QuEChERS

Agilent Bond Elut QuEChERS kits make sample preparation as easy as 1- 2- 3. Prepackaged Agilent Bond Elut QuEChERS kits are an easy way to capture the time-saving benefits of QuEChERS sample preparation.

- Extraction kits with preweighed anhydrous salts in sealed packets allow you to add salts after you add organic solvent to your sample—minimizing an exothermic reaction that can compromise analyte recovery.
- Dispersive kits with sorbents and salts supplied in 2 or 15 mL centrifuge tubes accommodate the aliquot volumes specified by current AOAC and EN methodologies.
- Universal dispersive kits provide excellent recoveries and reproducibility for all types of fruits and vegetables.
- Ceramic homogenizers break up salt agglomerates, promoting consistent sample extraction and increasing product recovery during extraction and dispersion.
- EMR–Lipid dispersive kit provides excellent lipid removal from high lipid (>3 %) matrix.

## Agilent Recommended Standard Operating Procedure for QuEChERS

In just three easy steps, you can prepare any fruit or vegetable sample for multiclass, multiresidue pesticide analysis.

\*Aliquot size is specified by the method, and kits are created for these specific amounts. For pesticides with acidic groups (phenoxyalcanoic acids), analyze directly by LC/MS/MS at this point (skip the dispersive SPE stage or use a dispersive SPE without PSA, for example, p/n 5982-4921, p/n 5982-4956). These acidic groups will react with PSA, so dispersive SPE kits without PSA should be used.

QuEChERS AOAC 2007.01 extraction kit, 5982-5755

Ceramic homogenizer for 50 mL tubes, 5982-9313

## QuEChERS Extraction Kits

### Step 1: Extraction

- Available with or without 50 mL centrifuge tubes and caps
- Available with or without ceramic homogenizers, (CH)
- Include MgSO<sub>4</sub>, NaCl, or other salts for buffering, preweighed in anhydrous packets

Choose the extraction salt packet based on your method of analysis, AOAC or EN. The buffered extraction salts are amenable for more labile pesticides. Adding solvent and then salts to a comminuted fruit or vegetable sample (10 or 15 g) enables you to extract the pesticides of interest into the organic layer. Agilent prepackages its QuEChERS salts and buffers in anhydrous packages. This allows you to add them after adding your solvent to the sample, as specified in QuEChERS methodologies.

In the table below, the CH products contain the appropriately sized ceramic homogenizers for those particular kits.

For more information on ceramic homogenizers, see Page 85, 92

### QuEChERS Extraction Kits

Method	Buffered	Contents	Ceramic Homogenizers	With 50 mL Tubes 50/pk		Packets Only	
				50/pk	200/pk	50/pk	200/pk
AOAC 2007.01	Yes	6 g MgSO <sub>4</sub> ; 1.5 g NaAcetate	Yes	5982-5755CH			
			No	5982-5755		5982-6755	5982-7755
Original (10 g samples)	No	4 g MgSO <sub>4</sub> ; 1 g NaCl	Yes	5982-5550CH			
			No	5982-5550		5982-6550	5982-7550
Original (15 g samples)	No	6 g MgSO <sub>4</sub> ; 1.5 g NaCl	Yes	5982-5555CH

EN 15662	Yes	4 g MgSO <sub>4</sub> ; 1 g NaCl; 1 g NaCitrate; 0.5 g disodium citrate sesquihydrate	Yes	5982-5650CH			
			No	5982-5650		5982-6650	5982-7650
Acrylamides	No	4 g MgSO <sub>4</sub> ; 0.5 g NaCl	No	5982-5850			
Veterinary Drugs	No	4 g Na <sub>2</sub> SO <sub>4</sub> ; 1 g NaCl	No	5982-0032			

## QuEChERS Dispersive Kits

### Step 2: Dispersive SPE Cleanup

Select the dispersive SPE kit suited to the type of food being analyzed and the method you are following. In this step, an aliquot of the sample extract from step one is added to a 2 or 15 mL centrifuge tube containing a small amount of SPE sorbent and MgSO<sub>4</sub>. The sorbent will remove interfering matrix materials from the sample, while the MgSO<sub>4</sub> helps get rid of excess water and improve analyte partitioning. Selected kits are now available with ceramic homogenizers (two per tube). Their part numbers are designated by a CH.

QuEChERS dispersive kit, 5982-5022

#### QuEChERS Dispersive Kits: Fruits and Vegetables

## QuEChERS Ceramic Homogenizers

Ceramic homogenizers increase your overall lab productivity and give you greater confidence in your results.

The same great ceramic homogenizers available in our QuEChERS kits are also available to bulk buy, providing excellent grinding of the samples. They make analyte extraction easier by:

- Increasing extraction efficiency
- Maintaining high, reproducible extractions
- Minimizing variance between technicians
- Breaking up salt agglomerates and maintaining a consistent grinding of homogenizing material

Ceramic homogenizer for 50 mL tubes, 5982-9313

### QuEChERS Ceramic Homogenizers

Description	Unit	Part No.
Ceramic homogenizer for 2 mL tubes	100/pk	5982-9311
Ceramic homogenizer for 15 mL tubes	100/pk	5982-9312
Ceramic homogenizer for 50 mL tubes	100/pk	5982-9313

QC solution, AOAC Method, 500 g/mL,  
5190-0503

## Standards for QuEChERS Products

- Save time and avoid inconvenience of making standards
- Available for both GC and LC instruments
- Ready to use for QuEChERS extractions—no dilutions required

In addition to our industry-leading QuEChERS kits, Agilent makes your analysis easier by providing standards for the most commonly used regulatory methods, including AOAC and EN.

### Standards for QuEChERS Products

Description	Concentration	Kit Contents	Part No.
HPLC internal standard, EN method	100 g/mL	Tris (1,3-dichloroisopropyl) phosphate, Nicarbazin	5190-0500
QC solution, AOAC method	500 g/mL	Triphenyl phosphate	5190-0503
QC surrogate for GC standard, EN method	500 g/mL 1000 g/mL	(2,2',3,4,4',5'-hexachlorobiphenyl) Anthracene-d10	5190-0499
HPLC and GC internal standard, AOAC method	1000 g/mL	Parathion-d10 (diethyl-d10), Alpha-BHC-d6 (alpha-HCH-d6)	5190-0502
GC internal standard, EN method	5000 g/mL	(2,2'5,5'-tetrachlorobiphenyl), Triphenylmethane, Tris (1,3-dichloroisopropyl) phosphate	5190-0501

# Bond Elut Enhanced Matrix Removal—Lipid

Interference from lipids is a problem for labs measuring trace residues in fatty foods or complex biological matrices. Lipids can build up in the instrument and column, decreasing lifetime and reducing analyte sensitivity due to ion suppression. The requirement for MS maintenance increases too, because of lipid deposits on the source.

The need for lipid removal is well understood, but current methods often sacrifice analyte recovery, removing some target analytes along with the lipids. Now, you don't have to choose between lipid removal and analyte recovery, because Agilent Enhanced Matrix Removal—Lipid delivers the most complete lipid removal and analyte recovery of any sample preparation product.

For optimal results, we recommend trying Bond Elut EMR—Lipid polish pouch kit (anhydrous MgSO<sub>4</sub> only), which contains 50 pouches. Alternatively, a polish tube kit (NaCl/anhydrous MgSO<sub>4</sub>) containing 50 centrifuge tubes of 15 mL is available.

- **Higher-quality results:** A cleaner sample profile leads to greater data integrity, confidence in results, and fewer reruns.
- **Improved productivity:** Better sensitivity and signal-to-noise from fewer matrix interferences enables faster data processing and greater sample throughput.
- **Reduced lab costs:** Cleaner samples using EMR—Lipid can offer up to 50 % less MS source maintenance, giving you more time to analyze samples rather than spend time on costly troubleshooting, downtime, and instrument repair.
- **Simplified workflows:** Standardize on an easy-to-use, single-sorbent procedure that maximizes analyte recovery from a wide variety of fatty samples.
- **Save time and money** by reducing material costs, inventory, training time, and documentation to streamline lab efficiency.

# Captiva Filtration

Captiva's unique dual-depth filtration media provides complete removal of precipitated proteins and outstanding resistance to sample clogging, with no loss of analytes. All Captiva components are ultraclean, and rigorously tested to prevent nonspecific binding. With Captiva, your samples are processed quickly and reliably. Captiva is easily automated for enhanced productivity and excellent for sample storage.

Time-consuming sample transfer steps required with conventional precipitation are now a thing of the past. With Captiva, clean, clear filtrates are ready for injection in minutes, with a simple and streamlined three-step process.

While many regulatory and standard methods require sample filtration before measurement, Captiva syringe filters can also improve your sample analysis workflow if you're working with a nonregulated method.

Sample filtration before measurement using Captiva syringe filters provides a convenient way to remove particulates before determination.

The Captiva range includes:

- Captiva EMR–Lipid 96-well plates and cartridges for highly selective and efficient lipid/matrix removal
- Captiva ND nondrip filtration plates for organic-based protein precipitation
- Captiva ND Lipids nondrip filtration plates for lipid and protein depletion
- Captiva 96-well filter plates for general sample filtration
- Captiva filter cartridges, offering all the same Captiva benefits in a standard SPE cartridge format
- Captiva syringe filters, available in a wide range of sizes, formats, and membranes

Captiva ND 96-well plate, A5969045

## TIPS AND TOOLS

Nebulizer blockage is the most frequent cause of instrument downtime for analysts working with AA/MP-AES and ICP-MS/ICP-OES. Nebulization of samples containing even small amounts of particulates can block the nebulizer, introducing drift, reducing sensitivity and, ultimately, requiring shutdown of the instrument.

Captiva syringe filters are an essential tool to reduce blockage from particulates when using AA/MP-AES or ICP-MS/ICP-OES.

Captiva EMR–Lipid, 1 mL, 96-well plate, 40 mg,  
1/pk (5190-1000)

## Captiva EMR–Lipid

- Highly selective and efficient lipid removal: The unique EMR–Lipid mechanism combines size exclusion and hydrophobic interactions between the sorbent and the long aliphatic chain of lipids.
- Clog-free operation: Advanced filter design and construction technology ensures an easy flow.
- Time savings and improved precision: A protein crash solvent retention frit in 1 mL and 96-well plate formats promotes a streamlined, automatable in-well protein precipitation workflow.

Captiva EMR–Lipid provides highly selective and efficient lipid/matrix removal without unwanted analyte loss. The novel EMR–Lipid technology removes lipids based on a combination of size exclusion and hydrophobic interaction. Effective lipid removal assures minimal ion suppression of target analytes, which significantly improves method reliability and ruggedness. The 96-well plate and 1 mL cartridge formats contain a solvent retention frit, allowing in-well protein precipitation, which streamlines sample preparation. The improved filter design gives easy flow with vacuum or positive pressure. The 3 and 6 mL cartridge formats allow gravity flow with the absence of solvent retention frits and are easy to use. Winner of an Analytical Scientist Innovation Award (TASIA) for 2017.

### Captiva EMR–Lipid

Description	Volume (mL)	Sorbent Mass (mg)	Unit	Part No.
<b>Straight Barrel Cartridges</b>

Captiva EMR–Lipid	1	40	5/pk	5190-1001

## Captiva ND

A simple-to-use filtration device designed for high-throughput, automated, in-well protein precipitation. Built with a unique nondrip (ND) membrane, Captiva ND plates allow for solvent-first protein precipitation using methanol or acetonitrile. Captiva's unique dual filter design offers fast uniform flow while avoiding sample loss and filter plugging.

## Captiva ND Lipids

Designed for LC/MS bio-analysis of plasma, Captiva ND Lipids combine the ease-of-use and superior flow properties of Captiva ND with a unique chemical filter. The plate efficiently removes ion-suppressing phospholipids, proteins, and surfactant interferences from precipitated plasma samples.

## Captiva Syringe Filters

Captiva syringe filters reliably filter from 1 to 150 mL sample volume for HPLC, UHPLC, CE, ICP-MS, and LC/MS, with superior flow rates and maximum loading capacity to ensure maximum productivity. All products are supplied with an HPLC or LC/MS certificate guaranteeing extremely low levels of extractables. Packages are color-coded by membrane for easy and fast identification.

Premium syringe filter, glass microfiber, 5190-5122

## Captiva ND

- Easy automation—nondrip design resists organic solvent flow until vacuum is applied
- Exceptional flow—dual-depth filter avoids plugged membranes and lost samples
- Efficient protein removal—MS-suitable samples in as little as one-fifth of the time
- Multiple pore sizes available for greater flexibility with solvent use

Captiva ND's unique nondrip design simplifies your workflow, ends the need to use messy tip or well seals, and reduces the number of liquid transfer steps needed to process samples. Best of all, Captiva ND's dual-depth filter construction delivers a fast reproducible flow, so you get uniform sample treatment and reliable filtrate recovery in a fraction of the time of other protein precipitation plates.

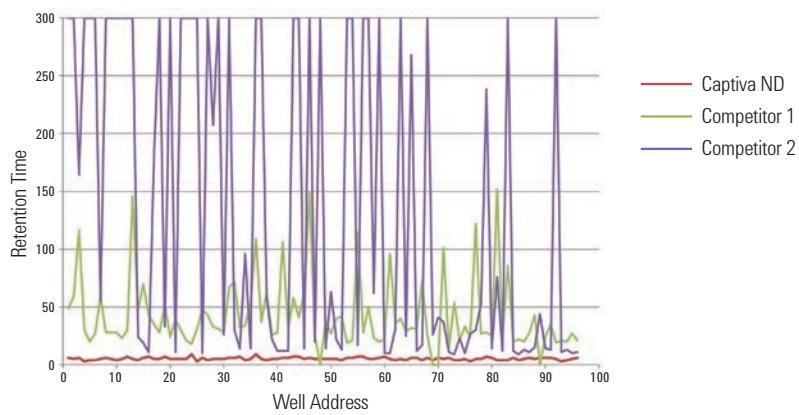

### Captiva ND 96-Well Filter Plates

Description	Unit	Part No.
Captiva ND plate, 0.2 µm, polypropylene Recommended for both methanol and acetonitrile	5/pk	A5969002
Captiva ND plate, 0.45 µm, polypropylene Suitable for acetonitrile only	5/pk	A5969045

For Research Use Only. Not for use in diagnostic procedures.

### Get fast, reproducible flow with Agilent Captiva ND

**Flow Rate Consistency**  
**(100 µL Plasma w/400 µL ACN)**

## Captiva ND Lipids

### Improve Analysis by Depleting Phospholipids During Precipitation

- More precise and reproducible quantitation with removal of phospholipids and proteins
- Increased productivity due to extended column lifetimes and cleaner MS ion sources
- Simple three-step procedure
- Available with 0.2 µm pore size only, to optimize lipid removal; methanol recommended

Designed for LC/MS bio-analysis of plasma, Captiva ND Lipids combine the ease-of-use and superior flow properties of Captiva ND with a unique chemical filter. The plate efficiently removes ion-suppressing phospholipids, proteins, and surfactant interferences from precipitated plasma samples.

For Research Use Only. Not for use in diagnostic procedures.

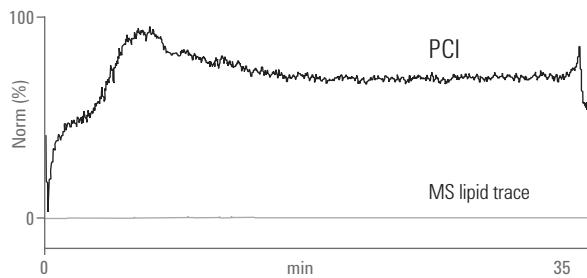

## Captiva Filtration

### Postcolumn infusion (PCI) of albuterol before treatment with Captiva ND Lipids

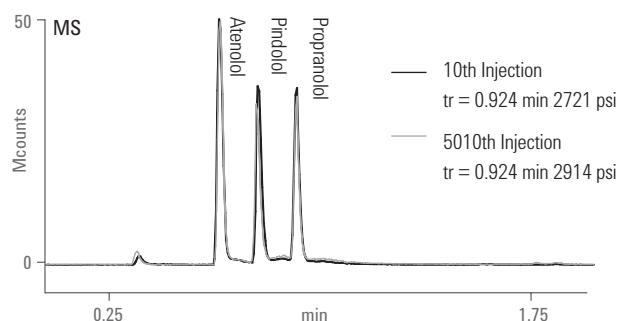

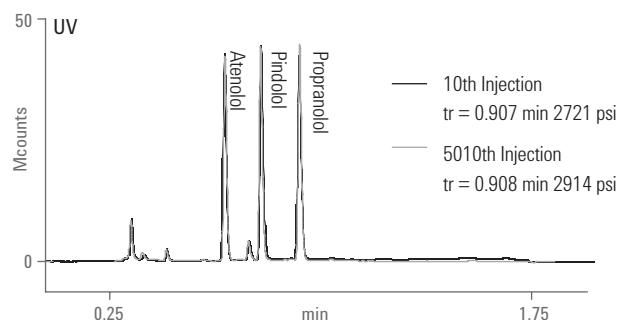

Note that the ion suppression features (top trace) correlate with the elution of phospholipids (bottom trace).

### Same experiment after protein and lipid depletion with Captiva ND Lipids

Ion suppression is dramatically reduced and the lipids are almost nondetectable.

### Longevity study illustrating prolonged column lifetime when using Captiva ND Lipids

No significant changes in back pressure, retention time, and peak shape with Captiva ND Lipids after 10 and 5010 injections for LC/MS or LC/MS/MS bio-analysis (top = UV detection; bottom = MS detection).

## Captiva 96-Well Filter Kits

- The industry standard for centrifugation-free sample filtration
- Fast and reliable processing improves productivity
- Starter kits contain everything you need

Faster than centrifugation and easily automated, Captiva's unique dual-depth filtration media provides outstanding resistance to sample clogging. With Captiva, your samples are processed quickly and reliably, and you can avoid fibrinogen clogging forever. The plates are also excellent for sample storage. All Captiva components are ultraclean, and rigorously tested to ensure against nonspecific binding. Starter kits contain everything you need to get up and running with minimum fuss. Replacement kits include everything you need to replenish your Captiva system.

## Captiva 96-Well Filter Plates

- Protect HPLC columns from clogging to reduce instrument downtime
- Clean and clear filtrates offer improved sensitivity
- High analyte recovery with simple, robust methods allows faster method development

Filtration is simple, versatile, and necessary to prevent clogging of valuable HPLC columns. Captiva 0.2 and 0.45 µm depth filter plates are ideal for filtering samples before LC/MS injection. Captiva 10 and 20 µm glass fiber filter plates are designed for clarifying highly particle-laden samples, such as freshly thawed plasma and hepatocyte filtration, and can prevent sample transfer problems from pipette tip clogging. They are perfect for automated systems and for use with DuoSeal 96 96-well seals.

## Captiva 96-Well Collection Plates and Cover

- Designed for Captiva filtration and SPEC, as well as Bond Elut 96 applications
- Regular 1 mL format offers compatibility with further automation or liquid handling
- Silicone cover preserves sample integrity

Captiva 96-well collection plates are specially designed for use with Captiva filtration plates, SPEC SPE 96-well plates, and Bond Elut 96-well plates. The 1 mL capacity provides the volume needed to collect all of your filtrate or eluate. Captiva pierceable 96-well silicone covers are easily applied to completely seal the plates, ensuring no sample loss from spillage or evaporation and no sample contamination. The silicone is designed for 96-well auto injectors, providing easy piercing and removal.

## Captiva Filter Cartridges

- Standard SPE format
- Ideal for LC/MS samples
- Avoid sample transfer problems
- Nondrip (ND) 3 mL cartridges resist flow until vacuum is applied
- Effectively remove phospholipids from biological samples with Captiva ND Lipids

Captiva filter cartridges bring all of the benefits of Captiva filtration to the standard SPE cartridge format. The 0.2 µm and 0.45 µm filter cartridges are ideal for preparing precipitated protein samples for LC/MS analysis. The Captiva 10 µm glass fiber filter cartridge is designed for clarifying highly particle-laden samples, such as freshly thawed plasma, which prevents sample transfer problems due to pipette tip clogging.

## CaptiVac Vacuum Collars

- Pre-aligned for trouble-free operation
- Vacuum sealed for maximum efficiency
- Simple, cost-effective solution

For use with Captiva filtration and SPEC 96-well Plates, this patented vacuum collar is a completely transparent device that joins Captiva or SPEC plates directly onto your collection plate. The unique design of the CaptiVac collar forms a preset, pre-aligned vacuum seal between the filtration and collection plate, which positions the outlet tips at a specified distance inside each well, to prevent cross contamination of samples.

CaptiVac vacuum collar, A796

## Premium Syringe Filters

- **More choices.** Captiva syringe filters are available in many sizes, formats, and membranes to cover every matrix and sample.
- **Certified.** All products are supplied with an HPLC or LC/MS certificate, guaranteeing extremely low levels of observed extractables.
- **Exceptional flow rate.** Captiva syringe filters have excellent flow rates and maximum sample loading capacity.
- **Highest quality.** Agilent Captiva syringe filters are constructed with the highest-grade virgin polypropylene housing, and are securely welded to prevent bursting and ensure sample integrity.

Sample filtration before HPLC, LC/MS, UHPLC, CE, and ICP-MS analysis is critical to achieving optimal system performance, and Agilent Captiva premium syringe filters make the process faster than ever with the industry's highest flow rates and loading capacities. All syringes are HPLC or LC/MS certified to guarantee low levels of observed extractables. PES (part numbers 5190-5094, 5190-5095, 5190-5096, and 5190-5098) and glass fiber (p/n 5190-5120) premium syringe filters are LC/MS certified to be free of extractables.

Choose from a variety of membranes to suit your needs.

### Captiva Disposable Syringes, 100/pk

Volume (mL)	Part No.
5	9301-6476
10	9301-6474
20	5190-5103

## Step-by-step Instructions

Follow these steps to realize the full benefits of filtration

### WARNING

Use caution with syringes smaller than 10 mL. They can easily generate enough power to burst the syringe filter. Agilent syringe filters are for laboratory use only.

Prewetting the filter, while not necessary, can be performed as an extra step.

## Agilent Captiva Syringe Filter Selection Guide

### Step 1

### Step 2

### Step 3

**What is the Particle Size of your LC Column**

Columns packed <2 µm particles	Columns packed >2 µm particles
0.2 µm UHPLC	0.2 or 0.45 µm HPLC

## Applications

Type of Filtration	Recommended	Alternatives
HPLC • UHPLC • LC/MS • GC	RC	PTFE or Nylon
ICP-MS	PTFE	Glass Fiber/PTFE (High Particle Samples)
CE	RC	Nylon
Undiluted organic solvents	PTFE	Nylon
Protein analysis • samples with biomolecules—buffers	PES	RC or CA
Tissue culture media	PES	RC or CA
High particle-load samples—organic solvents	Glass Fiber/PTFE	
High particle-load samples—aqueous solutions	Glass Fiber/Nylon	
AA, ICP-OES, and MP-AES	PES	PTFE or Polypropylene

## Proof of Performance: Filtration Efficiency

### Testing Method

The surfactant solution, 0.1 % Triton X-100, was used to prepare 0.01 % Latex Beads (0.3 and 0.5 µm) solution. The 0.1 % Triton X-100 was used to maintain the homogeneity of latex beads solutions.

### Filtration

The challenging solution was passed through each individual syringe filter and a 1 mL filtrate was collected in a 2 mL vial for HPLC run. Ten different filters from each kind of filter were tested.

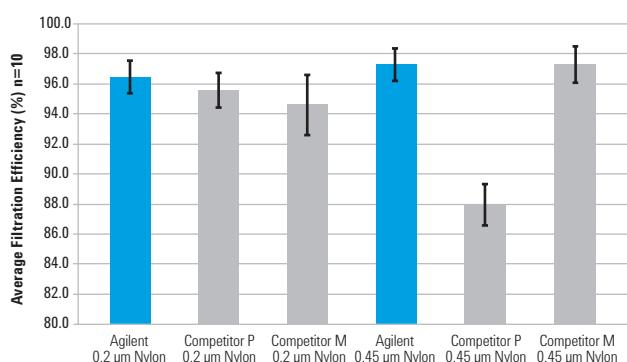

### Filtrate measuring on HPLC/UV

The maximum absorbance of the latex beads solutions was observed at 272 nm, which was used to correlate latex bead concentration with absorbance. A simple HPLC method was used for automatic testing under UV 272 nm. No column was used. The mobile phase was water, and the flow rate of 1.0 mL/min was used.

An eluted peak at 272 nm was used for filtration efficiency calculation. Blank 0.1 % Triton X-100 was run to correct contributions from surfactant absorbance at 272 nm.

**The Agilent Captiva syringe filters provide equivalent or better filtration efficiency than competitors' equivalent products for particulates removal**

Average Filtration Efficiency of Agilent Captiva Syringe Filters vs. Competitors

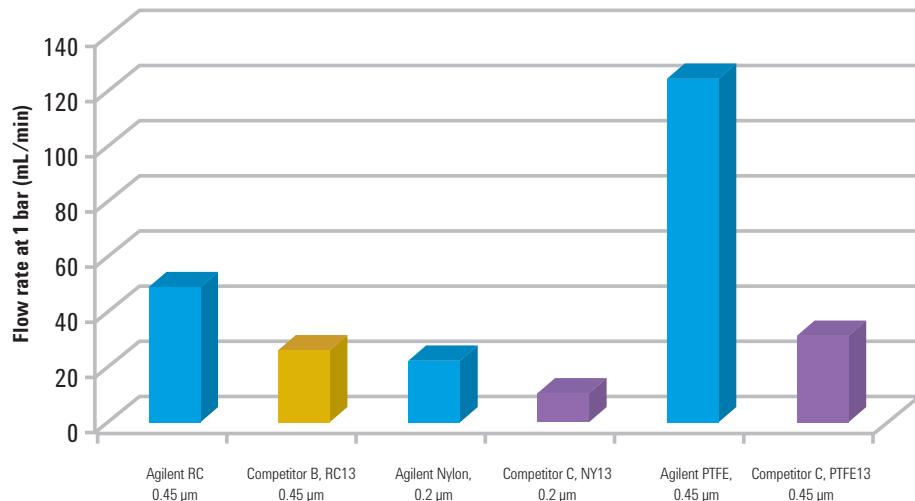

<b>Filtration efficiency (%) calculation</b>	$\text{Filtration EFF (\%)} = \frac{(PeakArea_{\text{Unfiltered LBsolution}} - PeakArea_{\text{Unfiltered Blank}}) - (PeakArea_{\text{Filtered LBsolution}} - PeakArea_{\text{Filtered Blank}})}{(PeakArea_{\text{Unfiltered LBsolution}} - PeakArea_{\text{Unfiltered Blank}})} \times 100\%$

## Proof of Performance: Flow Rate and Volume Capacity

Agilent Captiva premium syringe filters provide unparalleled loading capacity with the fastest flow rates in the market today to allow for maximum efficiency.

### Flow rate for 15 mm premium syringe filters

### Capacity (volume) of 15 mm syringe filters over time (with particulate-laden samples)

## Filtration Impact on LC Column Life

### Importance of Filtration

Column plugging is the most frequent cause of column failure encountered by analytical chemists. Injection of samples containing even small amounts of particulate will clog the column inlet, causing high column backpressure, retention time shift, and loss of resolution, which shortens the normal column lifetime. This impact can be more significant for sub-2 µm columns. These smaller particle size columns are usually used under high pressure, and are therefore more sensitive to pressure increases caused by the accumulated particulates on the column.

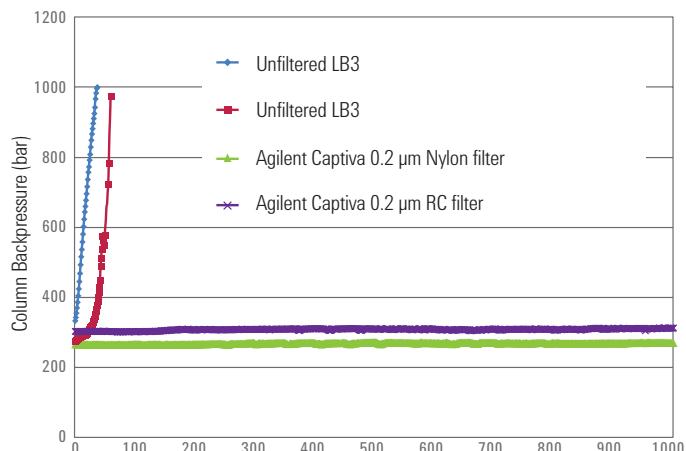

## Testing Method

### Sample Preparation

- A.) The surfactant solution, 0.002 % Triton X-100, was used to prepare 0.05 % latex bead (0.3 µm and 0.5 µm) solution.
- B.) Latex bead solution (0.3 µm) was used for sub-2 µm column life test. Unfiltered and filtered (by 0.2 µm filters) samples were used for comparison of impact on sub-2 µm column life.
- C.) Human plasma extract was used for sub-2 µm column life application test. Unfiltered, centrifuged, and filtered (by 0.2 µm filters) samples were used for comparison of impact on sub-2 µm column life. The sample was prepared using the following steps.
  1. 2 mL of human plasma was aliquoted into a test tube.
  2. 10 mL of Acetonitrile with 1 % Acetic Acid was added.
  3. Sample was vortexed vigorously and then centrifuged at 4000 rpm for 5 min.
  4. The supernatant was transferred into a clean test tube.
  5. The supernatant was blown dry with N<sub>2</sub> flow at 37 °C.
  6. The dried sample was reconstituted in 10:90 MeOH/H<sub>2</sub>O, vortexed and sonicated.

### Results—Filtration impact on sub-2 µm column A by latex bead 0.3 µm solution

## Filtration

The challenging solution was passed through each individual syringe filter and a 1 mL filtrate was collected in a 2 mL vial for HPLC run.

### **UHPLC instrumentation (for sub-2 column life test)**

**Column:** Agilent ZORBAX Eclipse Plus C18 RRHD column, 2.1 x 50 mm, 1.8  $\mu$ m, p/n 959757-902.

Column was disconnected from the detector and allowed to run to drain.

**Mobile phase:** Acetonitrile: Water (35:65, v/v)

**Flow rate:** 0.4 mL/min, isocratic.

**Injections:** 10  $\mu$ L per injection, one injection per minute.

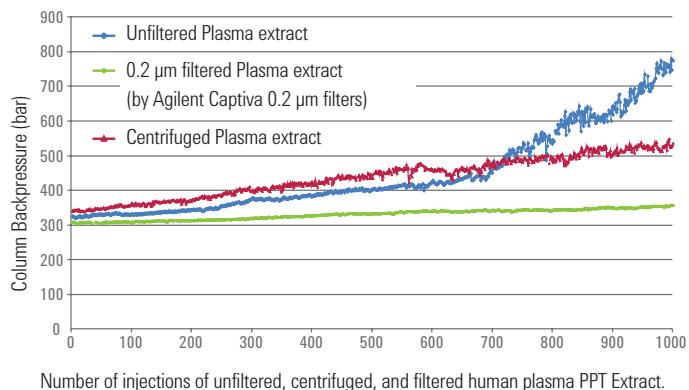

**Monitoring:** Column backpressure was recorded with the number of injections.

**Column failure:** When column back pressure exceeded 1000 bar.

**Sequence:** A 1000 injections sequence was usually used, unless the column failed in the middle due to high pressure. A new column was used for each individual sequence.

**Conclusion:** Filtration before sample introduction into an HPLC system significantly improves column life time.

### **Results—Filtration impact on sub-2 $\mu$ m column B by human plasma PPT extract**

# Chem Elut Supported Liquid Extraction (SLE)

## Chem Elut and Hydromatrix

- High-purity sorbent supported liquid extraction (SLE) applications
- Available in prepacked cartridges or in bulk
- Packing method delivers excellent tube-to-tube reproducibility

Chem Elut is an economical broad performance sorbent for rapid, general sample preparation of biological samples, such as plasma, serum, whole blood, and urine. Chem Elut products are available in buffered and unbuffered formats. The buffered devices can be used for simple scrubbing operations on organic reactions. The base-treated cartridge can remove residual acid compounds from various matrices.

### Chem Elut Cartridges\*

Description	Volume (mL)	Unit	Part No.
4.5	3	100/pk	12198004
9.0	3	100/pk	12198005
Unbuffered	0.3	100/pk	12198001
	1	100/pk	12198002
	3	100/pk	12198003
	5	100/pk	12198006
	10	100/pk	12198007
	20	100/pk	12198008
	50	50/pk	12198009
	100	25/pk	12198010
	300	15/pk	12198011

\* For Chem Elut cartridge, select the product that fits the total volume of the sample. Volumes stated here are not the actual cartridge size, but rather the volume available for sample.

### Typical Matrices

Aqueous, biological fluids, organic reaction mixtures (scavenging)

### Primary Extraction Mechanism

Solid supported LLE

### Compound Types

Nitrosamines, pesticides, herbicides

## Hydromatrix

Hydromatrix is a high purity, inert diatomaceous earth sorbent, available in 96-well plates (Combilute and Chem Elut SLE Plates, which are designed for sample volumes of less than 80 µL) and as bulk material, offering end-user flexibility and an excellent diversity of applications.

### Hydromatrix

Description	Part No.
Hydromatrix bulk material, 1 kg	198003
Hydromatrix bulk material, 4 kg	198004

ITLC SG paper, SGI0001

## Chromatography Papers

- More convenient with faster developing times than traditional TLC; no interference from organic binders
- Ideal for evaluating radioisotope QC testing
- Separates lipids and other nonpolar compounds
- Can easily be cut to convenient testing sizes, and can be imprinted

Chromatography paper is used in thin layer chromatography applications, such as those that evaluate radioisotope purity. The porous paper is made of glass microfibers impregnated with silica gel. Agilent offers two kinds of paper: SA (contains sodium salt) and SG (contains potassium salt).

### **Chromatography Papers**

Description	Part No.
Chromatography paper (SA), 4.5 x 12 in, 50/pk	A120B12
ITLC SG paper, 4.5 x 12 in, 50/pk	SGI0001

# Sample Processing Devices and Accessories

## Positive Pressure

- Uniform flow: Restricted-flow ports ensure consistent processing across the manifold, regardless of cartridge or well contents.
- No more troublesome stopcocks: The PPM-48 eliminates the need for stopcocks that are necessary with vacuum manifolds and must be individually and manually controlled.
- Speed and cost efficiency: The 48-cartridge capacity lets you process more samples at once.
- Time and resource savings: The autosampler vial collection rack for the PPM-48 allows you to skip the final transfer step.
- Greater flexibility: Forced gas supplies a wide range of pressures for processing diverse samples, including viscous samples.

Positive pressure processing of cartridges and 96-well plates, such as solid phase extraction (SPE), supported liquid extraction (SLE), and filtration (protein precipitation), offers many advantages over traditional vacuum processing. Conventional vacuum manifolds pull liquid from the bottom of a cartridge or 96-well plate. When faster flowing cartridges run dry, the vacuum will follow the path of least resistance through the empty cartridges, slowing the flow through the remaining cartridges. This inconsistency can lead to variations in processing times and irreproducible results.

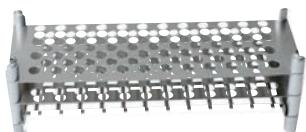

The Agilent positive pressure manifold 48 processor (PPM-48) and 96 processor (PPM-96) are excellent alternatives for sample processing. The PPM-48 and PPM-96 have unique restricted flow ports to create consistent gas flow through every channel, even when the well/cartridges are not being used, or run dry. This consistency ensures reproducibility from row-to-row and cartridge-to-cartridge regardless of the cartridge or well contents.

Positive pressure manifold 48 processor  
(PPM-48) (5191-4101)

## Positive Pressure Manifold 96 Processor (PPM-96)

For 96-well plate, VersaPlate, or tabless 1 mL cartridge processing, choose the PPM-96.

Product	Description	Part No.
<b>Positive Pressure Manifold Processor</b>		
PPM-96: 96-well plate format	Included with the PPM-96: single well waste plate (5191-4121), plate holder (5191-4120), and processor installation kit (5191-4114).	5191-4116
<b>PPM-96 Accessories</b>		
	Installation kit for PPM-48 and PPM-96	5191-4114
	Sealing gasket for PPM-96	5191-4117
Additional Accessories	Tabless cartridge holder for PPM-96, 1 mL	5191-4119
	Plate holder	5191-4120
	Single well waste plate for PPM-96	5191-4121
Gas trap	Big hydrocarbon trap (1/4 inch fittings)	BHT-4

Positive pressure manifold 96 processor  
(5191-4116)

Single well waste plate, for PPM-96  
(5191-4121)

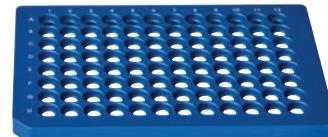

Plate holder, for PPM-96 (5191-4120)

Tabless cartridge holder, 1 mL, for PPM-96  
(5191-4119)

Sealing gasket, for PPM-96 (5191-4117)

Vac Elut SPS 24 manifold

## Vac Elut SPS 24 Manifold

- Closed operation prevents cross contamination
- Stainless steel tips deliver maximum extract purity
- Range of rack sizes covers most tube configurations
- Increased productivity/sample throughput

The Vac Elut SPS 24 allows simultaneous processing of up to 24 SPE cartridges. Like all Vac Elut manifolds, the SPS 24 is made from durable, solvent-resistant materials and engineered to last. The glass sides allow easy viewing of the entire sample collection process.

The ultimate feature of the SPS 24 manifold is its waste diversion funnel, which enables all steps of the SPE procedure to be completed without removing the lid. Since the collection rack is placed inside the unit before extraction begins, splash back and cross contamination are eliminated, while hazardous waste and biohazard exposure are minimized. Wastes collect outside of the manifold itself, simplifying cleanup and reducing the time needed to extract and elute samples.

Complete with replacement stainless steel delivery tips for maximum extract purity, the Vac Elut SPS 24 system also includes a vacuum controller/release, collection rack, and port sealing plugs. Racks for several different collection tube configurations are available.

### Vac Elut SPS 24 Manifold

Description	Part No.
Vac Elut SPS 24 manifold with collection rack for 10 x 75 mm test tubes	12234003
Vac Elut SPS 24 manifold with collection rack for 12 x 75 mm test tubes	12234041
Vac Elut SPS 24 manifold with collection rack for 13 x 100 mm test tubes	12234022
Vac Elut SPS 24 manifold with collection rack for 16 x 100 mm test tubes	12234004
Replacement Components	
Collection rack and funnel set for 12 or 15 mL conical tubes	12234027
Collection rack and funnel set for 12 x 75 mm test tubes	12234030
Collection rack and funnel set for 13 x 100 mm test tubes	12234031
Collection rack and funnel set for 16 x 100 mm test tubes	12234028
Elastic lid fasteners, 6/pk	12234034
Complete Upper Lid Assembly	12234025C
SPS 24 upper lid cover	12234025
SPS 24 waste tower repair kit Includes base exit tube, hose connector, washer, center tube, 90 connector elbow	12234005
Waste funnel for 12 x 75 or 13 x 100 mm test tubes	12234032
Stainless steel delivery needles, 25/pk	12234038

## Vac Elut Cartridge Manifolds

- Disposable needles eliminate cross contamination
- Rugged, reliable construction

Engineered to increase laboratory productivity, the corrosion-resistant Vac Elut vacuum extraction manifolds permit extraction of up to 12 or 20 samples at one time, for improved efficiency. The manifold's clear glass base allows careful monitoring of the entire sample collection process, and the compact design requires little bench space.

To minimize the risk of sample carryover, the low-cost, disposable, medical-grade polypropylene delivery needles can be easily replaced. Polypropylene extender tips are also available as a replacement for the standard needle valves, ensuring a direct path into the collection tube. Correct sample identification is ensured by an interlocking fit between the lid and internal test tube rack.

## Vac Elut 20 Vacuum Extraction Manifolds

- For extractions greater than 10 mL
- Transparent glass base allows you to monitor the whole collection operation
- Simple vacuum adjustment

The Vac Elut 20 vacuum control valve, vacuum gauge, and quick release valve are mounted on the lid, away from the corrosive waste stream and within convenient reach. The solvent-resistant polypropylene rack is available in various sizes to accommodate the types of collection tubes commonly used in sample preparation. Manifold sets include the glass basin, lid cover, collection rack, and vacuum gauge assembly.

## Vac Elut 20 Manifold Tall Glass Basin

The Vac Elut 20, with a large glass basin and collection rack, accommodates larger 16 x 150 mm test tubes. The same high-quality material and features on the standard Vac Elut system are incorporated on this special unit. These collection vessels can be employed in combinatorial chemistry applications, using large boiling tubes for collection of purified synthesis mixtures, or for any SPE extraction in which an elution volume greater than 10 mL is required.

## Vac Elut 12 Manifold

The Vac Elut 12 vacuum extraction manifold is a compact tool for small sample sets. It offers the same durability of components and operation as the Vac Elut 20 manifolds, but works well when only a few samples need to be processed at a time. This Vac Elut has 12 sample positions, a clear glass basin for easy visualization of the extraction, and a gauge for precise vacuum settings.

Needle tip ejector tool		5982-9105
Cartridge stacking adapters	12/pk	5982-9109

## Luer Stopcocks

- Control flow rates during SPE
- Improve method reproducibility
- Instant isolation from vacuum reduces accidental tube drying

Luer stopcocks are used to provide independent flow control of each individual Bond Elut cartridge when used with vacuum manifolds. They are made from solvent resistant high-grade polypropylene, are reusable, and can be readily cleaned using organic solvents, such as methanol or acetone.

### Luer Stopcocks

Description	Unit	Part No.
Luer stopcocks short	15/pk	12131005
Luer stopcocks long	20/pk	12234520

Luer stopcocks, 12131005

Bond Elut 96-well manifold, acrylic, 5133000

96-well manifold shimset, 12236104

96-well vacuum manifold, base assembly only, 5185-5797

Bond Elut 96 square-well plate, 5133009

## Well Plate Vacuum Manifolds

- Can handle 96-well fixed position plates or second version to handle 96-well flexible format plate
- Constructed with polypropylene base and polyethylene lid
- Small footprint
- Supplied with on/off valve, vacuum gauge, and fine vacuum control valve
- Disposable reservoir tray collects excess sample and wash solvents
- Spacer inserts can be placed into the base so that collection plates of differing heights can be processed (both deep-well and standard microplates), ensuring maximum penetration of the SPE plate into the collection plate and reducing well-to-well contamination
- Solvent resistant gasket in the manifold lid

Agilent Vacuum manifolds for 96-well plates handle both fixed position and second version plates. It contains a disposable reservoir tray for collecting excess sample and wash solvents. Spacer inserts can be placed into the base so that collection plates of differing heights can be processed—ensuring maximum penetration of the SPE plate into the collection plate, and reducing well-to-well contamination. Agilent manifolds and accessories complement the quality of our sorbents. Configurations and individual components can be bought, providing flexibility and increased capability at any stage, from method development to high-throughput operation.

Collection plate spacer in sizes to match the collection plate used, 5185-5780

# Did You Know?

Your autosampler vial can now filter your sample

## Reduce the steps in your GC or LC workflow with new Agilent Captiva filter vials

Longer column life. Less downtime. Greater sample integrity. Filtering samples before analysis can help your lab achieve all of these goals.

And now... Agilent Captiva filter vials make it easier than ever. These special vials do the filtering for you—giving you one less step in your workflow. You'll benefit from:

- **Greater convenience**

Filtration takes place inside the vial, reducing steps and tools.

- **Cleaner samples**

Fewer touchpoints in your sample journey mean fewer chances for contamination.

- **Higher-quality data**

Even small amounts of particulates can clog your column inlet, causing high backpressure, retention-time shift, and resolution loss.

**Agilent CrossLab**  
From Insight to Outcome

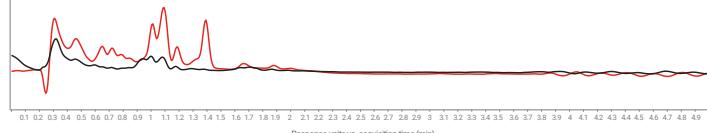

## Both Agilent Captiva syringe filters and filter vials provide excellent cleanliness for better chromatography

Caffeine = 5  $\mu$ L of 10 ppm (50 ng)

Black: Agilent Captiva filter vial

Red: Agilent Captiva Premium syringe filter

The green line represents a 5  $\mu$ L injection of 10 ppm (50 ng) solution of caffeine on a LC DAD instrument.

The Agilent Captiva filtration portfolio is designed to ensure you can choose the best product for your lab. Whether you prefer the convenience of a filter vial, the value of an econofilter, or the certified performance of a premium syringe filter, Captiva filtration has the solution for your particulate removal needs.

## What makes Agilent Captiva filter vials so unique?

### All-in-one solution

Agilent Captiva filter vials replace the combination of syringe filters, syringes, autosampler vials, septa, and caps with a single unit.

### Easy as 1-2-3

#### 1. Fill

Use a pipette to add sample to the fill line.

#### 2. Cover

Twist gently to ensure a secure seal.

#### 3. Plunge

Press the plunger slowly for about three seconds to filter the sample.

When using in an autosampler, adjust draw position to 10 mm, and turn off bottom sensing.

## Filtration

# Mini-UniPrep Syringeless Filters

Mini-UniPrep syringeless filters provide a quick, economical, and environmentally conservative way to filter samples prior to HPLC analysis. They replace the combination of syringe filters, syringes, autosampler vials, septa, and caps with a single disposable unit. Mini-UniPrep allows sample filtration at about 40% of the cost in a third of the time.

## Features

- Replaces the need for syringes, syringe filters, and a separate vial and cap
- Environmentally friendly design means less glass and plastic are discarded during sample filtration process
- Available in four popular membrane materials (PTEE, PP, RC, and nylon) in 0.45 or 0.20 µm pore sizes
- Designed to fit into any autosampler accommodating 12 x 32 mm vials
- Compatible with all Agilent 1100 and 1200 Series autosamplers
- Sold in convenient 100-packs

# Bond Elut Focus

Bond Elut Focus features a unique amide-functionalized, polar-enhanced sorbent technology delivering outstanding retention. The extraction method eliminates the complex pH adjustments necessary with ion exchange and mixed mode methods. The unique ligand chemistry on the sorbent dramatically increases the retention of basic analytes.

The improved retention for polar analytes with Focus allows the use of a strong power rinse without causing analyte loss. Rigorous washes using 10 to 20% MeOH can be used to aggressively remove endogenous matrix interferences. For very polar analytes that are held by strictly polar interactions, washes of up to 100% can be used.

## Product List

Part Number	SPE Format	Bed Mass	Volume	Particle Size	Sorbent Phase	Unit
A5106010	Straight Barrel Cartridge	10 mg	1 mL		Focus	100 Pack
A5306021			3 mL			100
A5606050	Straight Barrel Cartridge	50 mg	6 mL		Focus	100 Pack
A5306022	Straight Barrel Cartridge	60 mg	3 mL		Focus	100 Pack

## Features

- Simple, universal method reduces method validation times
- 'Power rinse' delivers cleaner extracts, improving sensitivity
- Hydrogen bond-donor capability increases retention of basic analytes

# Finally a More Reproducible Alternative to Liquid-Liquid Extraction for Lipid Analysis

## Bond Elut Lipid Extraction

### Achieve more reproducible and streamlined sample preparation for lipid analysis

In lipid analysis, sample preparation is critical to isolating lipids from any additional co-extractives, but the options have been limited. Liquid-liquid extraction (LLE) is a commonly used technique since it is widely accepted and perceived to be inexpensive. Labs may be unfamiliar with or hesitant to consider emerging technologies due to the time to get up and running and assumed costs of consumables versus LLE.

However, there are significant sacrifices made when using LLE, including method reproducibility, researchers' time and effort, and the requirement for more samples to achieve statistically reliable results.

Now, with Bond Elut Lipid Extraction solid phase extraction (SPE) cartridges and 96-well plates, you can achieve more reproducible and streamlined sample preparation for lipid analysis and reduce the need for precious samples for your research.

### Average Peak Area RSD (All Identified Features)

	Bond Elut Lipid Extraction SPE	LLE 1	LLE 2	LLE 3	LLE 4
LC/MS replicates	6.4%	5.8%	6.3%	7.1%	6.0%
Extraction replicates	9.4%	22.6%	12.2%	11.2%	19.8%

% RSD Values for Bond Elut Lipid Extraction versus four common LLE techniques

### With Bond Elut Lipid Extraction SPE you can:

- Achieve up to 58% time savings versus common LLE techniques
- Reduce time spent training staff for manual LLE workflows
- Improve reproducibility reducing the number of samples required for statistical validation
- Enable automation to accelerate sample processing and improve productivity
- Simplify extraction efforts compared to complicated and manual LLE techniques like sample transfer and phase separation

## Time Savings Potential of Bond Elut Lipid Extraction versus four common LLE techniques

	Bond Elut Lipid Extraction SPE	LLE 1	LLE 2	LLE 3	LLE 4 <sup>3</sup>
Protocol summary	SPE by 1:2 DCM/MeOH	LLE by 1:1 chloroform/ MeOH	LLE by 1:1 chloroform/ MeOH	LLE by 2:1 MTBE/MeOH	PPT by 1:1 BuOH/MeOH
Extraction time (minutes)	42	89	89	88	92
Additional extraction (minutes)	0	53	53	48	0
Dry and reconstitute (minutes)	30	30	30	30	40
Total time (minutes, inclusive of additional extraction, dry, reconstitute steps)	72	172	172	166	132
% Time savings achieved with Bond Elut Lipid Extraction SPE		58%	58%	57%	45%

1. Calculations based on processing 10 samples

2. DCM = dichloromethane; MeOH = methanol; MTBE = methyl tert-butyl ether; BuOH = n-butanol; PPT = protein precipitation

3. Conventional LLE methods (1-4) were used for SPE method assessment and evaluation.

# Bond Elut Mycotoxin

Bond Elut Mycotoxin is a novel sorbent which cleans up food extracts for improved trichothecene and zearalenone analysis. Results are comparable or superior to competing methods, including immunoaffinity columns (IAC) and charcoal/alumina columns. The sorbent is a proprietary silica-based ion exchange material.

## Product List

Part Number	SPE Format	Bed Mass	Volume	Particle Size	Sorbent Phase	Unit
12165001B	Bond Elut Jr	500 mg			Mycotoxin	100 Pack
12102167	Straight Barrel Cartridge	500 mg	3 mL		Mycotoxin	50 Pack

## Features

- Sample methodology saves time and increases throughput
- Use with a broad range of food matrices
- Economic and time-saving alternative to immunoaffinity techniques

# Agilent TOP-DNA and TOP-RNA

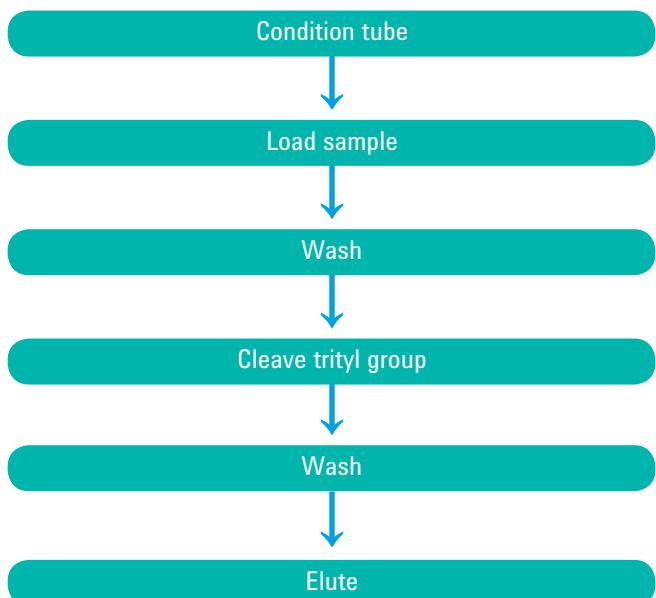

Agilent TOP-DNA and TOP-RNA make it easy to quickly obtain outstanding yields of high-purity synthetic DNA and RNA oligonucleotides. Both products remove interfering salts, incomplete synthesis products and other impurities in a few simple steps.

## Key benefits

- **Better performance.** You'll obtain more of the usable product you want.
  - Higher yield - typically > 85%
  - Higher purity - typically > 90%
- **Convenience.** Perform detritylation of both DNA and RNA oligos in the tube. Avoid time-consuming alternatives like HPLC.
- **Increased productivity.** The tubes can be arrayed in 96-well format to ensure that purification doesn't limit your throughput. Typical cycle times are 10 to 15 minutes (vacuum required and Agilent VersaPlate, part no. 75700001).
- **High binding capacity.** Purify products from 200 nmol to 1 µmol synthesis scale, depending on oligo length.
- **Flexibility.** Use the same product for all of your DNA oligos regardless of length.

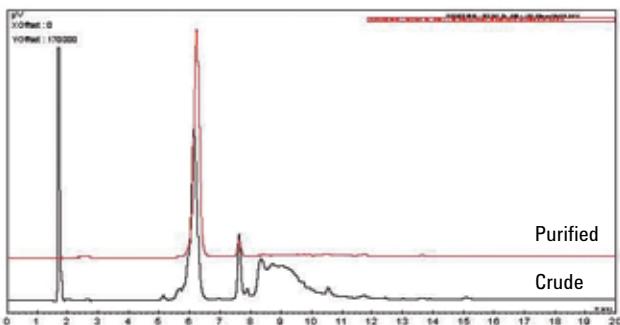

## Purify oligos in 6 easy steps

TOP-DNA and TOP-RNA tubes from Agilent deliver higher yields and purity for your custom synthesized oligonucleotides. Both products remove salts, incomplete synthesis products and other impurities in a few simple steps.

## TOP-DNA

TOP-DNA can be used for the purification of synthetic oligos, regardless of their length. You won't need separate methods for short and long products. The unique sorbent allows detritylation while oligos are bound in the cartridge. Base deprotection can be done with the faster AMA method (1:1 mixture of ammonium hydroxide and methylamine, 40 wt % solution in water), saving valuable time and increasing throughput.

High performance RNA oligonucleotide purification using Agilent TOP-RNA tube. Publication 5990-8974EN

## TOP-RNA

Agilent has designed a complete solution for the rapid purification of RNA oligos. The 2 M Tris Quenching Buffer allows deprotection of the 2' hydroxyl group without removal of the 5' trityl group. Trityl-on oligos can be loaded onto the TOP-RNA tube, detritylated and eluted. You avoid time-consuming HPLC or low-yielding gel purifications.

## General Information for Agilent Smart SPME Arrows

	PDMS - 100 µm		DVB/PDMS - 120 µm
	Acrylate - 100 µm		DVB/Carbon WR/PDMS - 120 µm
	Carbon WR/PDMS - 120 µm		PDMS - 250 µm

This user guide contains important notes for the operator. It is highly recommended for operators to become familiarized with the product before use.

- PAL3 Firmware 3.1 or higher is required for the use of Smart SPME Arrows with the complete scope of functions.
- The use of the SPME Arrow Conditioning Module and the Heatex Stirrer together with Smart SPME Arrows is essential. The SPME Fiber Conditioning Module cannot be used with Smart SPME Arrows.
- Due to the larger outer diameter (od) of SPME Arrows, the inlet turn top assembly of the gas chromatograph (GC) will require a modification. Please contact your GC provider for more information.
- Smart SPME Arrows ods are visually identifiable by a red (1.1 mm od) or yellow (1.5 mm od) holder.

**Table 1.** Smart SPME Arrow ordering information. All Smart SPME Arrows have a phase length of 20 mm.

No.	Outer Diameter	Phase Thickness	Color Code	Set of 3 Smart SPME Arrow Description Part Number
PDMS Smart SPME Arrow				
1	1.1 mm	100 µm	Red	5610-5862
2*	1.5 mm	100 µm	Red	5610-5866
Acrylate Smart SPME Arrow				
3	1.1 mm	100 µm	Gray	5610-5858
Carbon WR/PDMS Smart SPME Arrow				
4	1.1 mm	120 µm	Light blue	5610-5859
5*	1.5 mm	120 µm	Light blue	5610-5863
DVB/PDMS Smart SPME Arrow				
6	1.1 mm	120 µm	Violet	5610-5860
7*	1.5 mm	120 µm	Violet	5610-5865
DVB/Carbon WR/PDMS Smart SPME Arrow				
8	1.1 mm	120 µm	Dark gray	5610-5861
9*	1.5 mm	120 µm	Dark gray	5610-5864
PDMS Smart SPME Arrow				
10	1.5 mm	250 µm	Black	5610-5867
Smart SPME Arrow Selection for Method Development				
Smart SPME Arrow selection of five Smart SPME Arrow standard types No. 1, 3, 4, 6, and 10				
Smart SPME Arrow selection of five Smart SPME Arrow standard types No. 1, 3, 4, 6, and 8				

\* Smart SPME Arrow wide types, for use with solvents or reagents, that may lead to moderate swelling of PDMS phases.

PDMS = Polymethylsiloxane; Acrylate = Polyacrylate; Carbon WR = Carbon Wide Range; DVB = Divinylbenzene

### Using Agilent Smart SPME Arrows

- Set the PAL gas input pressure to 2 bar when using Conditioning Module(s). This enables a conditioning gas flow above 15 mL/min to be reached.
- Do not extend conditioning times longer than necessary.
- The lifetime of SPME Arrow phase will decrease if exposed to maximum temperature for longer periods. Depending on your application, choose the lowest necessary temperature, not the highest possible.
- Operating temperatures include conditioning and desorption temperatures in the injector.
- Conditioning times can be applied for pre- and postconditioning.
- For liquid immersion techniques, a liquid wash step may help to reduce carryover.
- Prevent permanent storage at conditioning temperatures.
- For Agilent GCs, injector penetration depth is defaulted to 40 mm. Note that the optimal penetration depth may vary depending on other injector types.
- Early leakage of septa may occur if injector nuts are not tight enough or overtightened.
- SPME Arrows are specified for use at a maximum injector pressure of 50 psi.

Please refer to Table 3 for additional consumables for use with SPME Arrows.

**Table 3.** Additional part numbers for use with Agilent Smart SPME Arrows.

Additional Consumables	
5190-6168	Inlet liner, ultra inert, splitless, straight, 2 mm id
5183-4757-100	Inlet septa, bleed and temperature optimized (BTO), nonstick, 11 mm
5183-4759-100	Inlet septa, Advanced Green, nonstick, 11 mm
5182-3446	Merlin microseal nut for use with SPME Arrows
5182-3447	Replacement microseals for use with 1.1 mm SPME Arrows
5182-3448	Replacement microseals for use with 1.5 mm SPME Arrows
5188-6537	Vial, screw top, headspace, amber, round bottom, 20 mL, 23 x 75 mm, 100/pk
5188-2753	Vial, screw top, headspace, clear, 20 mL, 23 x 75 mm, 100/pk
5188-2759	Caps/septa, screw, headspace, steel, high temperature septa, certified, 18 mm, 100/pk

**Table 2.** Operational parameters.

No.	Phase Thickness	Maximum Temperature (°C)	Recommended Operating Temperature (°C)	Conditioning Time (min) Min   Max   Recom.	Arrow Rinsing Solvent	Arrow Rinsing Time (min) Min   Max   Recom.
PDMS Smart SPME Arrow						
1, 2	100 µm	300	200 to 280	1   30   5	MeOH   EtOH   IPA	0.5   10   2
Polyacrylate Smart SPME Arrow						
3	100 µm	280	200 to 250	1   30   5	MeOH   EtOH   aliphatic HC	0.5   10   2
Carbon WR / PDMS Smart SPME Arrow						
4, 5	120 µm	300	200 to 300	1   30   5	MeOH	0.5   10   2
DVB / PDMS Smart SPME Arrow						
6, 7	120 µm	300	220 to 270	1   30   10	MeOH   EtOH   IPA	0.5   10   2
DVB / Carbon WR / PDMS Smart SPME Arrow						
8, 9	120 µm	300	220 to 270	1   30   10	MeOH   EtOH   IPA	0.5   10   2
PDMS Smart SPME Arrow						
10	250 µm	300	220 to 280	1   30   10	MeOH   EtOH   IPA	0.5   10   2

MeOH = Methanol; EtOH = Ethanol; IPA = Isopropanol (2-propanol); aliphatic HC = aliphatic hydrocarbons (e.g. n-Hexane)

## Agilent Smart SPME Arrow conditioning, cleaning, and handling

**Caution:** Without gas protection, the Smart SPME Arrow surface will be damaged if exposed to elevated temperatures.

### Smart SPME Arrow preconditioning

Before analytical use, it is mandatory to precondition each Smart SPME Arrow at a specified temperature in an inert gas phase environment.

Generally, it is recommended to precondition the Smart SPME Arrow 20 °C above the planned operating temperature, while respecting the maximum temperature threshold. The lifespan of the Smart SPME Arrow can be extended if it is not unnecessarily preconditioned at maximum temperature. Recommended temperatures and conditioning times are provided in Table 2.

Running a preconditioning step is highly recommended if the Smart SPME Arrow has either been stored without protection, been unused for a prolonged period, or if obvious dust particles are visible.

### Smart SPME Arrow conditioning

It is highly recommended to condition the Smart SPME Arrow after thermal desorption of the analytes has been completed. This conditioning is a preparatory step for the next analytical run. This helps to eliminate all possible contaminants from the Smart SPME Arrow that have not been desorbed and transferred to the GC column.

To avoid contamination of the GC inlet system and/or the GC column, it is recommended to remove the Smart SPME Arrow after the thermal desorption step from the GC injector and move the Smart SPME Arrow Tool to the SPME Conditioning Module for the conditioning step.

The larger sorption phase surface area of the Smart SPME Arrow can trap impurities from the ambient atmosphere if a Smart SPME Arrow has been left in the open. Agilent recommends running a blank before running a series of analytical samples. Evaluating the baseline level of the GC detector helps to ensure that the entire system, such as the Smart SPME Arrow, the GC inlet, the GC column, and detector, is free from any contaminants.

### Smart SPME Arrows rinsing

It is possible to clean the Smart SPME Arrow using an organic solvent. The recommended types of solvents are listed in Table 2. Only use the referenced solvents. Other solvents can cause a swelling of the PDMS phase, which would lead to significant damage.

It is important that a Smart SPME Arrow is not cleaned mechanically by any means; do not touch the Smart SPME Arrow with fingers, not even when wearing gloves. The cleaning process can be done manually by dipping the Smart

SPME Arrow into a container filled with the appropriate solvent or in an automated manner by defining a vial for cleaning.

To avoid potential solvent mix-ups, do not use the wash or waste solvents from the PAL System wash module.

### General remarks for Smart SPME Arrow conditioning

Table 2 summarizes the various parameters for conditioning and cleaning. The values provided are empirical values that are suitable for a number of applications and give reliable results.

It is not possible to visually judge the Smart SPME Arrow quality if there are no obvious signs of major mechanical damage, such as a fracture.

Any sign of staining, caused by a starting vitrification of the surface in case of a PDMS Smart SPME Arrow, or signs of a yellowish discoloration in the case of a Polyacrylate Smart SPME Arrow, does not give any indication of the remaining lifespan of the particular Smart SPME Arrow.

To extend the lifetime of a Smart SPME Arrow, exposure to high temperatures should be minimized. Do not exceed the maximum temperature for each Smart SPME Arrow type, as shown in Table 2.

### Headspace extraction: sample volume and penetration depth

For headspace extractions using Agilent 20 mL vials:

Sample Volume (mL)	Penetration Depth (mm)
<10	30
>10	Not recommended

### Liquid immersion: sample volume and penetration depth

For liquid immersion methods, we recommend you use Agilent 20 mL headspace vials with the following liquid sample volumes and their respective penetration depths. These settings will give best extraction conditions with minimized moisture transfer for liquid immersion.

Sample Volume (mL)	Penetration Depth (mm)
<15	Not recommended
15	50
16	45
17	40
18	30
>18	Not recommended

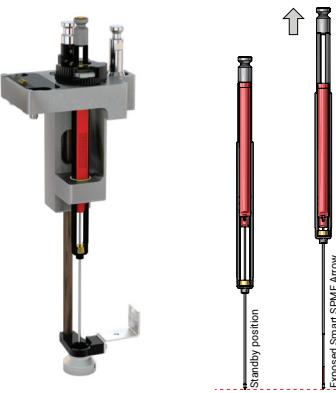

### Typical lifetimes

The lifetime of Smart SPME Arrows is dependent on method conditions. In general, the lifetime is decreased by thermal stress during conditioning and desorption. Generally, headspace applications use lower temperatures which can extend Smart SPME Arrow lifetime compared to direct immersion techniques.

The lifetime of SPME Arrows is also dependent on sufficient gas flow during desorption and conditioning (i.e. 20 mL/min). For liquid immersion, any particles in the liquid phase should be avoided. In case of particle-loaded liquids, filtration or centrifugation before extraction can increase the lifetime.

## Mandatory tool and modules for the use of Smart SPME Arrows

Agilent Smart SPME Arrows are compatible with the following tool and modules:

### SPME Arrow Tool

Agilent Smart SPME Arrows are fully functional with the PAL3 Series II system. The SPME Arrow Tool is compatible with both traditional SPME Arrows and Smart SPME Arrows. Smart SPME Arrows do not require the use of a separate Arrow holder. For the PAL3 System, the Smart SPME Arrows allow a maximum needle penetration depth of 70 mm.

**Note:** This tool cannot be used with SPME Fibers, and is not compatible with previous PAL and PAL-xt Systems.

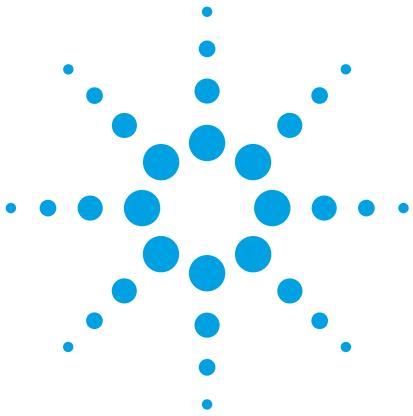

### Heatex Stirrer

A Heatex Stirrer is mandatory to incubate, equilibrate, and extract samples either from headspace or liquid phase (direct immersion).

### SPME Arrow Conditioning Module

The SPME Arrow Conditioning Module offers the functionality to clean (bake-out) the inserted Smart SPME Arrow in an inert gas phase after the analytical process to prepare it for the next analysis. This module is strongly recommended since it will help to protect the GC injection port from contamination and free up the port after thermal desorption.

## Simple, Fast Methods for Preparing Biological Fluids for LC/MS Analysis

### Technical Overview

#### Improve Liquid/Liquid Extraction for Bioanalysis Studies with Agilent Chem Elut Solid Supported Liquid Extraction (SLE) Products.

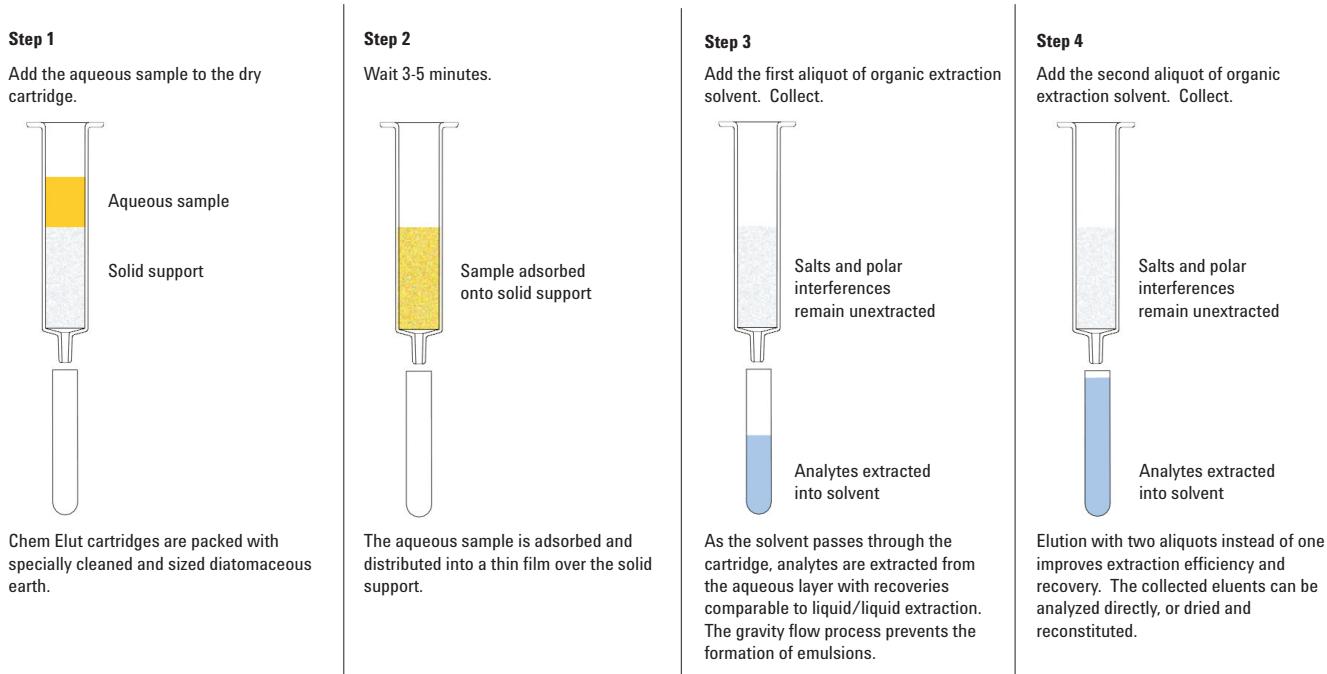

- Improve high-throughput metabolism, pharmacokinetic, and bioanalytical studies
- Get reproducible organic phase separation – every time
- Use simple, general methods for all sample types

High-throughput bioanalysis demands fast, ready-to-go methods that provide reliable results. Bioanalysts often turn to LLE extraction for low cost, simple method development and overall effectiveness for MS analysis [1]. Chem Elut SLE products improve your liquid/liquid extraction by streamlining methods for all sample types, and eliminating phase separation and emulsion problems. With Chem Elut, simply apply your sample to the gravity-flow cartridge and extract with solvent. Unlike traditional liquid/liquid extraction, shaking is not required and reproducibility is improved. Your blood, plasma, urine, or other biofluid samples are prepared for analysis quickly, reproducibly, and without emulsions. Choose from a 96-well plate or individual cartridges to fit any sample size, and start improving your sample prep.

Agilent Technologies

## Extraction Procedure for Aqueous and Biofluid Samples

## General Sample Preparation Methods

The general methods below can be used for many biological fluids, including blood, plasma, serum, urine, and bile. Select the method based on the acid/base properties of your analyte.

### Neutral Analytes

1. Select the Agilent Chem Elut cartridge based on total sample volume. Apply sample to appropriate Chem Elut product by gravity flow only. Note: sample will adsorb onto the adsorbent material, rather than flow through the cartridge. Allow 3-5 minutes for complete adsorption to take place.
2. Apply water-immiscible extraction solvent to the Chem Elut under gravity flow. Use two aliquots, with each aliquot equal to the original sample volume. Typical choices are dichloromethane, ethyl acetate, methyl t-butyl ether (MTBE), methyl ethyl ketone (MEK), and butyl acetate. For polar analytes with poor solubility in these solvents, the solvent can be diluted with isopropanol. Ensure that the final extraction solvent is water-immiscible.

3. Collect the extraction solvent as it passes through the Chem Elut cartridge. The extract can now be analyzed directly, or dried down and reconstituted in an LC mobile phase or a GC-amenable solvent.

### Basic Analytes

Dilute the sample with an equal volume of basic buffer. For amines and other weakly basic analytes, 1 M ammonium buffers, pH 9-10, are recommended. Follow the procedure for Neutral Analytes above, selecting the Chem Elut product based on the total sample volume including buffer.

### Acidic Analytes

Dilute the sample with an equal volume of acidic buffer. For carboxylic and other weakly acidic analytes, 1 M phosphate buffers, pH 2-3, are recommended. Follow the procedure for Neutral Analytes above, selecting the Chem Elut product based on the total sample volume including buffer.

## **Agilent Chem Elut improves 96-well sample preparation with fast parallel processing and no phase separation problems.**

A 96-well Chem Elut (Combilute) can be used for determination of basic drug concentrations in biological fluids for pharmacokinetic studies [2]. The Combilute plate adapts easily to automation, eliminates phase boundary guesswork, and the entire extraction can be performed on automated liquid handling apparatus without manual intervention.

1. Pipet plasma samples (0.2 mL), internal standard solution (500 nM, 0.05 mL), and 1% (w/v) ammonium carbonate solution, pH 9.5 (0.2 mL) into a 96-well collection plate.
2. Vortex-mix (manual method) or agitate with several aspirate and dispense cycles of liquid handler pipette-tips (automated method).
3. Transfer the sample mixtures to a Combilute 96-well plate positioned on top of a 2 mL 96-well collection plate. Allow samples to adsorb for 3-5 minutes. Note: the samples will not flow through the sorbent bed, but become adsorbed onto the sorbent material.
4. Elute with 2.5 mL MTBE by allowing the solvent to gravity-flow through each well. A very slight (< 1 in Hg) vacuum can be used to speed the flow slightly. Higher recoveries are often obtained if multiple aliquots of smaller volumes are used (that is, 2 × 1.25 mL aliquots of MTBE or other solvent).
5. Evaporate the extracts to dryness under nitrogen at 25 °C.
6. Reconstitute the residue with 0.1 mL mobile phase. Inject into LC/MS system for analysis.

## **Agilent Chem Elut is ideal for fast processing of blood or blood products.**

Extraction of drugs from blood is fast and easy with Chem Elut. Extraction of 33 benzodiazepines, metabolites, and similar substances from whole blood has been reported with average recoveries >75%, average RSDs of 9.2% and average limits of detection (LOD) and limits of quantitation (LOQ) values of 1.7 and 5.7 ng/mL, respectively [3].

1. Add 1 mL whole blood, spiked with a 50 mL internal standard solution in methanol, to a 3 mL Chem Elut cartridge buffered to pH 9 (item # 12198005). Add 1.5 mL distilled water to the cartridge. Wait 3-5 minutes for all liquid to adsorb onto the sorbent.
2. Elute with 3 × 4 mL methyl t-butyl ether (MTBE).
3. Evaporate the eluant at 50 °C. Reconstitute in 100 mL mobile phase and inject into LC/MS.

## **Agilent Chem Elut can be used for a variety of biological sample types with no method modification.**

In this example, melatonin is extracted from either plasma or cerebrospinal fluid [4], giving high recoveries (>90%), good reproducibility (C.V. <6%), with low detection limits (0.5 pg/mL, based on 1 mL samples).

1. Add TCA (60 mM, 300 µL) to plasma or cerebrospinal fluid samples (1 mL). Cool in an ice bath for 10 minutes, centrifuge (5,000 g, 10 minutes). Adjust the pH of supernatant to 7.4 by adding NaOH (1 M, 20 µL).
2. Apply an aqueous sample to the top of a 3 mL Chem Elut cartridge. Allow the sample to adsorb onto the sorbent for 3-5 minutes.
3. Extract the melatonin with 2 × 4 mL dichloromethane.
4. Evaporate the combined eluants in a water bath at 37 °C. Reconstitute in 60 µL mobile phase, inject 40 µL.

# Make the Switch to Supported Liquid Extraction (SLE) for Big Productivity Gains

New Agilent Chem Elut S, a synthetic SLE

Achieve consistent results—analyst to analyst and day to day—with synthetic SLE

Did you know that you can simplify labor-intensive liquid-liquid extraction (LLE)? Agilent Chem Elut S synthetic SLE products deliver reliable, reproducible results with minimal method development and a walk-away workflow.

With Chem Elut S, you can:

- Improve reproducibility by minimizing analyst-to-analyst variability.
- Eliminate emulsions because shaking is eliminated.
- Achieve superior removal of unwanted, interfering matrix, such as salts and phospholipids.
- Meet the recoveries you need—thanks to the minimal amount of extraction solvent required, resulting in a higher concentration of analytes collected.

How simple is the Chem Elut S SLE workflow?  
See for yourself.

## Step 1:

Load sample onto SLE sorbent.

## Step 2:

Wait five minutes.

## Step 3:

Extract with water-immiscible organic solvent.

Agilent  
**CrossLab**

From Insight to Outcome

Chem Elut S synthetic SLE products are synthetically optimized to deliver superior reproducibility, sample capacity, and data quality. They have a controlled pore and particle size, creating consistent flow and uniformity in every batch.

## Choose from a wide variety of formats to suit your application

Format	Sample Size	Tube/Well Size	Part No.	Ideal for the sample preparation of
Well plate	200 µL	2 mL	5610-2003	
Well plate	400 µL	2 mL	5610-2004	
Tube	200 µL	1 mL	5610-2005	*Biological samples—including urine, serum, plasma, whole blood, and oral fluids
Tube	400 µL	3 mL	5610-2006	
Tube	1 mL	6 mL	5610-2007	
Tube	3 mL	12 mL	5610-2008	Food samples
Tube	5 mL	20 mL	5610-2009	
Tube	10 mL	60 mL	5610-2010	
Tube	20 mL	60 mL	5610-2011	Food and environmental samples

\*For Research Use Only. Not for use in diagnostic procedures.

### Enhance your sample preparation workflow with Agilent InfinityLab LC solutions

Maximize efficiency at each step in your workflow and make every day more productive. Talk to us about combining workflow solutions like sample preparation with the power of InfinityLab products, Agilent OpenLab software, and Agilent CrossLab services.
